Note 1. Please take note that reverse connection of a power supply may cause destruction.

2. Stresses above these ratings may cause permanent damage such as characteristics degradation or destruction. Please do not exceed voltage below of GND-0.3V as it is bottom limit. In addition, operation amplifier is operated as normal when input voltage for electrical characteristics is in common mode input voltage range.

3. The value is measured under mounted on a glass epoxy base board (size 100mm×100mm, 1mm thickness, copper foiled surface base board area with 15% solid pattern).

Note that restrictions will be made to the following conditions for each product, and the derating ratio depending on the operating ambient temperature.

READ2354JSP: Derate at -5.5 mW/°C when T<sub>A</sub> > 69 °C

(Junction – ambient thermal resistance R<sub>th(J-A)</sub> = 183 °C/W)

## Notes

Output terminal : The over-current protection feature is not built in the output terminal of this product.

Therefore, please insert resistance to output port.

Input offset voltage : The amplifier circuit of the first block of operational amplifier.

A circuit suitable for operation near GND, and a circuit suitable for operation near +power supply. In case of input voltage of overlap point output port has a minute voltage shift or distortion.
