

# Features

## Evaluation Module

- Evaluation platform for RPM-2.0 buck regulator modules
- Thermal design considerations included
- EMI Class B filter
- Easy evaluation of trimming, sequencing, soft start, enable and sensing functions

## RPM-2.0-EVM-1

### Description

The RPM3.3-2.0-EVM-1 and RPM5.0-2.0-EVM-1 generate a constant output voltage with an output current up to 2A from an external DC Source. All the functions of the RPM3.3-2.0 and RPM5.0-2.0 like trimming, sequencing, soft-start, enable and sensing can be evaluated. Also the behavior in overload or over temperature can be evaluated easily before it is designed in. There are also evaluation modules with other output currents available.

### Selection Guide

Part Number	Input Voltage Range [VDC]	Output Voltage [VDC]	Output Current [A]
RPM3.3-2.0-EVM-1	3 - 17	3.3	2
RPM5.0-2.0-EVM-1	3 - 17	5	2

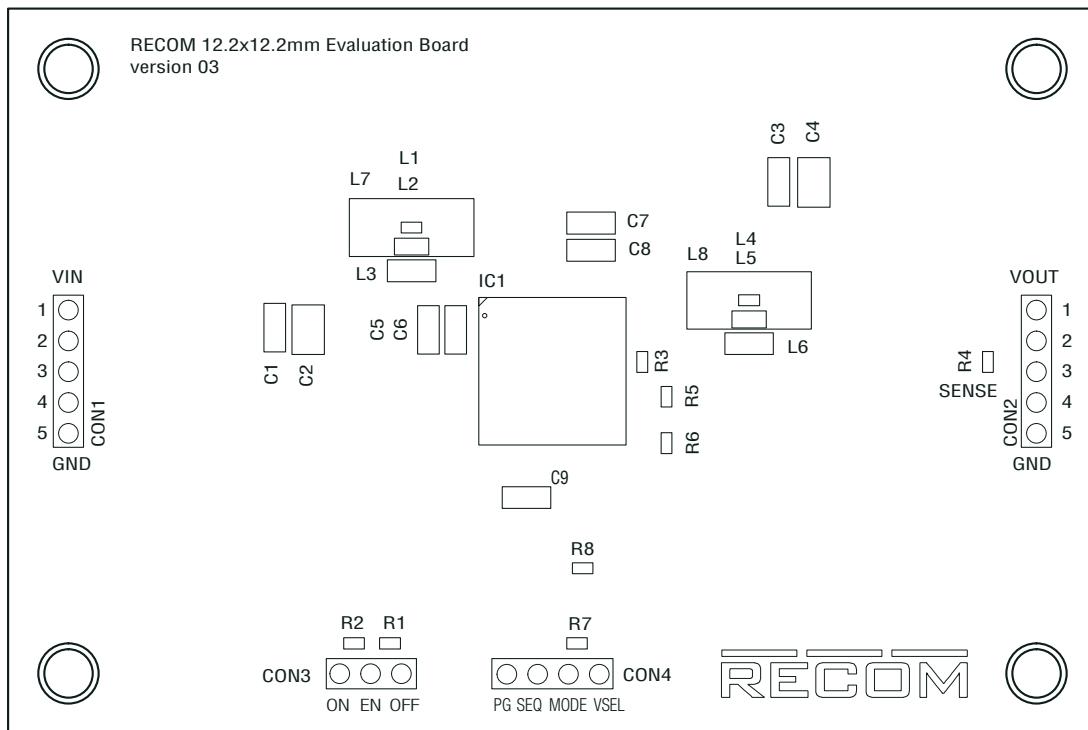

### Quick Start Guide

- 1) Connect CON1 to power supply
- 2) Connect CON2 to a Load
- 3) Connect sense to the required potential

The sense preset is via R3 directly at the power module, so the preset voltage is very accurate at the output of the RPM. To equalize ohmic losses of the filter, remove the resistor at R3, and solder a  $0\Omega$  resistor at R4. To sense directly at the load, desolder R3 and R4, and connect Pin3 of CON2 to the positive potential of the load.

Notice: if voltage drop from the output to the load is too high, voltage overshoots may occur – especially during load jumps.

- 4) Disable the device via CON3
- The device is preset as normally on. It can be disabled by pulling the enable pin to GND. Short R1 to disable the device.

**Evaluation Module****Specifications** (measured @  $T_a = 25^\circ\text{C}$ , full load after warm up unless otherwise stated)**Component Placement****Connector Description****Con1**

Pin	Name	Description
1,2	$V_{in}$	Positive Input Voltage (observe correct polarity!)
3	NC	Not connected
4,5	GND	Negative Input Voltage (Common GND)

**Con2**

Pin	Name	Description
1,2	$V_{out}$	Positive Output Voltage
3	SENSE	Output Voltage Sense Pin (leave open if not used)
4,5	GND	Negative Output Voltage (Common GND)

**Con3**

Pin	Name	Description
1	ON	Connect to $V_{in}$
2	EN	Enable Pin (leave open if not used)
3	OFF	Connected to GND

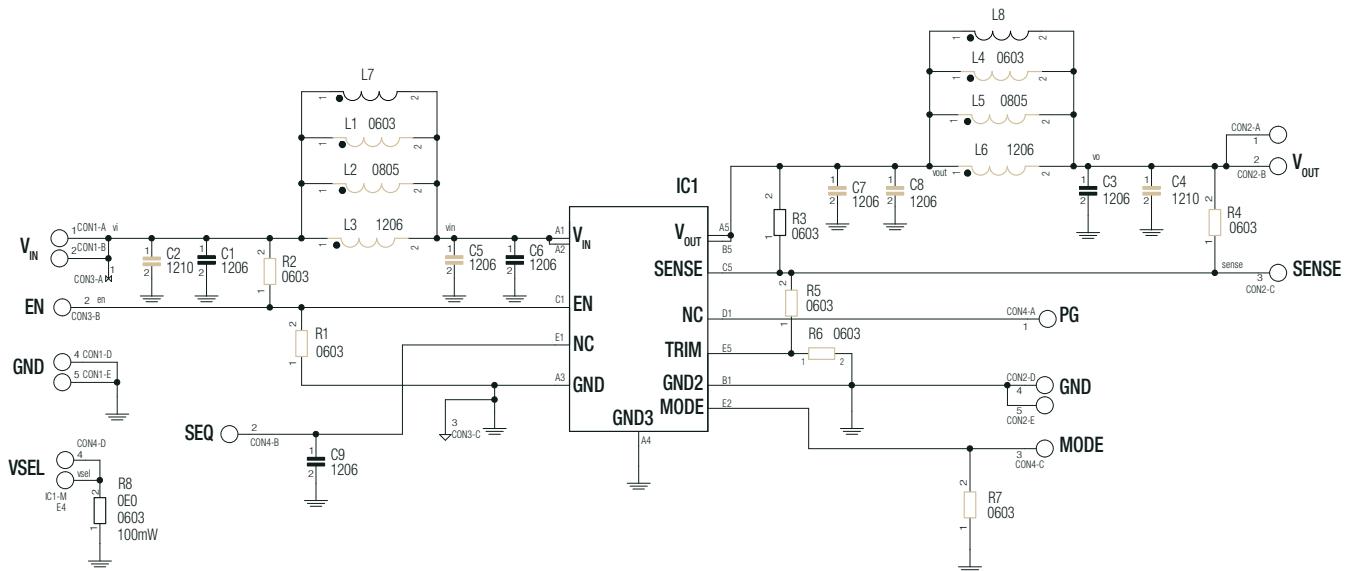

**Con4**

Pin	Name	Description
1	PG	Power Good Signal
2	SEQ	Sequencing and soft start
3	MODE	Not used
4	VSEL	Not used

## Evaluation Module

Specifications (measured @  $T_a = 25^\circ\text{C}$ , full load after warm up unless otherwise stated)

## Schematic

## Description

IC1: RPM-2.0 power module.

C1,C2,L1,L2,L3,L7,C5,C6: allow placement of various sized components to test input filter design. The populated filter is designed to meet EN55032 class B.

C7,C8,L4,L5,L6,L8,C3,C4: allow placement of various sized components to test output filter design. The populated filter is designed to meet EN55032 class B.

R1 and R2: configure enable pin. These resistors are not populated. The preset of IC1 is always on. Refer to IC1 datasheet for more information.

C9: sets soft-start time. Refer to IC1 datasheet for more information.

R3: populated  $0\Omega$  resistor for direct output voltage measurement. If sense is desired at a different location, for example after the filter or directly at the load, unsolder R3, and connect sense to the new measurement point.R4: sense point for output voltage after the filter. To set sense point here, remove R3 and solder a  $0\Omega$  resistor at R4.

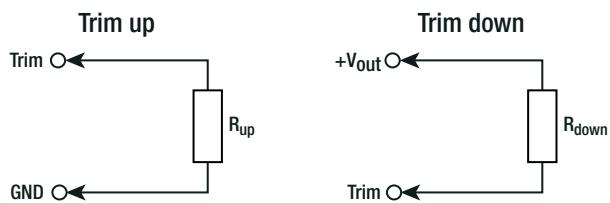

R7 and R8: no function on this board.

R5 and R6: trim the output voltage between 0.9V and 6.0V

## Specifications (measured @ Ta= 25°C, full load after warm up unless otherwise stated)

## OUTPUT VOLTAGE TRIMMING

The RPM series offers the feature of trimming the output voltage over a range between 0.9V and 6V by using external trim resistors. The values for trim resistors shown in trim tables below are according to standard E96 values; therefore, the specified voltage may slightly vary.

$V_{out_{nom}}$	= nominal output voltage	[VDC]
$V_{out_{set}}$	= trimmed output voltage	[VDC]
$V_{ref}$	= reference voltage	[VDC]
$R_{up}$	= trim up resistor	[Ω]
$R_{down}$	= trim down resistor	[Ω]
$R_1, R_2, R_3$	= internal resistors	[Ω]

$V_{out_{nom}}$	$R_1$	$R_2$	$R_3$	$V_{ref}$
3.3VDC	376kΩ		471kΩ	0.81VDC
5VDC	344kΩ	1kΩ	431kΩ	

Calculation:

$$R_{up} = \left[ \frac{R_1}{V_{out_{set}} - V_{ref}} \right] - R_2$$

$$R_{down} = \left[ \frac{(V_{out_{set}} - V_{ref}) \times R_3}{V_{out_{nom}} - V_{out_{set}}} \right]$$

Practical Example RPM3.3-2.0:

$$R_{up} = \left[ \frac{376k}{4.3 - 3.3} \right] - 1k = \underline{\underline{375k\Omega}}$$

$$R_{down} = \left[ \frac{(1.8 - 0.81) \times 471k}{3.3 - 1.8} \right] = \underline{\underline{311k\Omega}}$$

$R_{up}$  according to E96 ≈ 374kΩ

$R_{down}$  according to E96 ≈ 309kΩ

**RPM3.3-2.0****Trim up**

$V_{out_{set}}$ =	3.5	3.7	3.9	4.1	4.3	4.5	4.7	5.0	5.5	6.0	[VDC]
$R_{up}$ (E96) ≈	1M91	953k	634k	475k	374k	316k	267k	221k	169k	137k	[Ω]

**Trim down**

$V_{out_{set}}$ =	3.0	2.7	2.5	2.2	2.0	1.8	1.5	1.2	1.0	0.9	[VDC]
$R_{down}$ (E96) ≈	3M40	1M47	1M	590k	432k	309k	182k	86k6	39k2	17k4	[Ω]

**RPM5.0-2.0****Trim up**

$V_{out_{set}}$ =	5.1	5.2	5.3	5.4	5.5	5.6	5.7	5.8	5.9	6.0	[VDC]
$R_{up}$ (E96) ≈	3M32	1M69	1M15	866k	681k	576k	487k	422k	383k	340k	[Ω]

**Trim down**

$V_{out_{set}}$ =	4.5	4.0	3.5	3.3	2.5	1.8	1.5	1.2	1.0	0.9	[VDC]
$R_{down}$ (E96) ≈	3M16	1M37	768k	634k	294k	133k	84k5	44k2	20k5	9k53	[Ω]

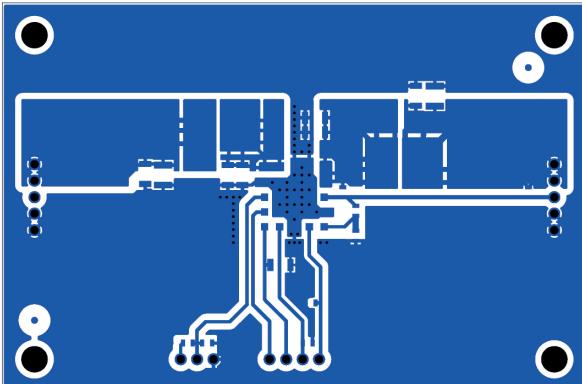

## Specifications (measured @ Ta= 25°C, full load after warm up unless otherwise stated)

## DIMENSION AND PHYSICAL CHARACTERISTICS

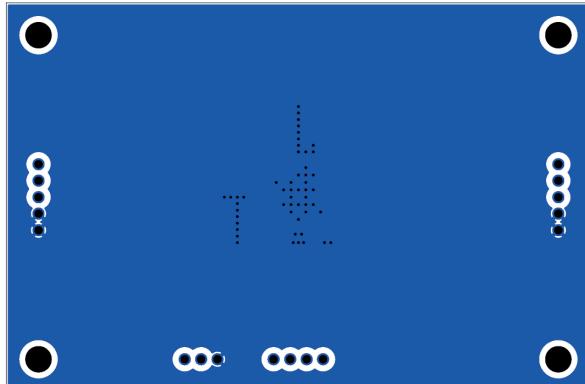

Parameter	Type	Value
Dimension (LxWxH)		90.0 x 60.0 x 26.0mm
Weight		23.3g typ.

## Layout

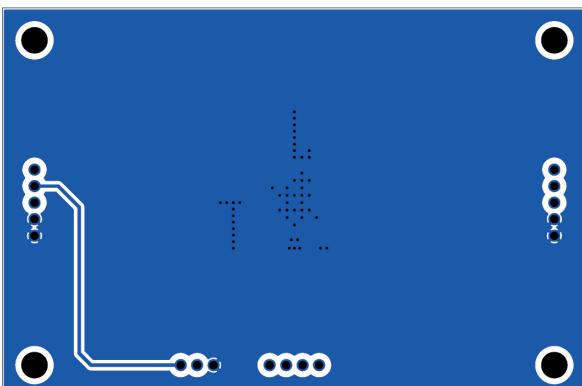

Top Layer

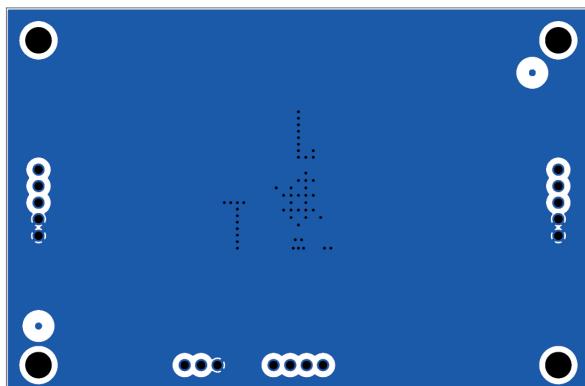

Layer 2 (GND)

Layer 3 (GND)

Bottom (GND)
