

Photoelectrics Amplifier Type S142A..

CARLO GAVAZZI

- μ -Processor controlled
- Amplifier relay for photoelectric switches
- Automatic or manual emitter power regulation
- Self-diagnostic functions
- Alignment help
- Timer option, S142B..
- Rated operational voltage:
24 VAC/DC, 24 VAC, 115 VAC or 230 VAC
- Output 8 A/250 VAC SPDT relay and 100 mA NPN
- LED indication: Automatic gain, output, level, emitter or receiver fault

Product Description

μ -processor controlled amplifier for one set of photoelectric through-beam sensors, type MOF., MMF. and MNF (see separate datasheets for MMFTR15 and MOFT20). Utilizes an 11-pin circular plug for easy connection.
8 A SPDT relay output, NPN / PNP transistor output or

alarm output. Diagnostics for sensor test during operation. Alignment help via LED or alternation of alarm output. Level indication for dirt accumulation. Manual or automatic emitter power regulation. Two emitter codes available for high neighbour immunity.

Ordering Key

S142 A RNN 924

Type _____
Special function _____
Output type _____
(R-Relay, N-NPN, P-PNP, T-Test)
Power supply _____

Type Selection

Delay on operate (t_v)	< 300 mS		Protection output transistor	Reverse polarity, short circuit and transients
Outputs Relay Rating (AgCdO) Resistive loads AC1 DC1 or Electrical life (typical) AC1	μ (micro gap) 8 A / 250 VAC (2500 VA) 0.2 A / 250 VDC (50 W) 2 A 25 VDC (50 W) > 100.000 operations		Supply to sensors Emitter Supply voltage (open loop) Current Output resistance Receiver Supply voltage (open loop) Short-circuit current Input resistance	Pins 5 & 7 15 V square wave < 450 mA, short circuit protected 10 Ω Pins 6 & 8 5 VDC 10 mA 470 Ω
Transistor output data Output current (I _e) Voltage drop (U _d)	< 100 mA @ 10-40 VDC (max. load capacity 100 nF) < 2,5 VDC @ 100 mA			

Specifications

Emitter power Power	Settings on DIP switch no 4, 50 % or 100 % range	Response time OFF-ON (t_{ON}) ON-OFF (t_{OFF})	20 mS 30 mS
Sensitivity adjustment Manual Automatic /Auto LED ON)	240° Potentiometer Potentiometer settings fully counter clockwise	Environment Overvoltage category Degree of protection Pollution degree	III (IEC 60664) IP 20 /IEC 60529, 60947-1) 3 (IEC 60664/60664A, 60947-1)
Max. sensing distance	Maximum range indicated on photoelectric switch data- sheets in 100 % settings	Temperature Operating Storage	-20° to +50°C (-4° to +122°F) -50° to +85°C (-58° to +185°F)
Rated insulation voltage (U)	250 VAC	Housing material	NORYL SE1, light grey
Dielectric voltage	>2.0 KVAC (rms) (contacts / electronics)	Weight AC supply AC/DC supply	200 g 125 g
Rated impulse withstand volt.	4 kV (1.2/50 μ S) (contacts / electronics) (IEC 664)	Approvals	UL508, UL325*, CSA
Operating frequency (f) Light / Dark ratio Relay output Transistor output	1:1 20 HZ 20 HZ	CE marking	EN12445, EN12453**, EN12978

* Must be approved in the final door installation

** EN12453 (applies only when using Carlo Gavazzi MOF sensors with 2- and 5-degrees optical angle)

Specifications

Diagnostics

If a fault occurs on either the emitter or receiver the Alarm LED and output will turn ON.

Receiver fault

During normal operation the receiver is monitored for faults.

If the wires are short-circuited the "Code A, Yellow LED" flashes at a rate of 2 Hz.

If the wires are broken the "Code A, Yellow LED" flashes at a rate of 4 Hz.

Emitter fault

During normal operation the emitter is monitored for faults.

If the wires are short-circuited the "Code B, Green LED" flashes at a rate of 2 Hz.

If the wires are broken the "Code B, Green LED" flashes at a rate of 4 Hz.

Alignment

If the alignment DIP switch is set the Yellow Signal LED Flashes according to the signal quality.

Low frequency means weak signal.

Steady indication means maximum signal. On long distance it is not possible to get a steady signal but the alignment is optimal when

the led flashes with the highest frequency.

On short distance the sensitivity can be reduced using the potentiometer and then get better readings in the alignment LED.

The ALARM output will follow the Signal LED in alignment mode, so a Sensor tester (optional) can be connected to serve as a remote indication during alignment of the sensors.

NB! In alignment mode the output is off.

Code A or B

When two sensor pairs are mounted close to each other

it is recommended to select one set to Code A and the other to Code B to minimize crosstalk.

Dirt reserve

For optimal detection excess gain settings can be selected using the Level Low/High DIP switch:

- High: Allows high dirt build-up.
- Low: Allows detection of semi-transparent objects.

Power settings

To avoid a too strong emitter the power can be reduced to 50% reducing the max distance to 25%
