

SxX8xSx Series  
EV Series 0.8 A Sensitive SCRs

Agency Approvals and Environmental

Environmental Approvals

Product Summary

Characteristic	Value	Unit
$I_{T(RMS)}$	0.8	A
$V_{DRM} / V_{RRM}$	400, 600, or 800	V
$I_{GT}$	5 to 200	$\mu A$

Schematic Symbol

Product Description

This new component series offers high static dv/dt and low turn off time ( $t_q$ ) sensitive SCR. It is specifically designed for Ground Fault Circuit Interrupter (GFCI) and Gas Ignition applications. All SCRs junctions are glass-passivated to ensure long term reliability and parametric stability.

Features

- Surge capability > 10 A
- Blocking voltage ( $V_{DRM} / V_{RRM}$ ) capability up to 800 V
- High dv/dt noise immunity
- Improved turn-off time ( $t_q$ ) < 25  $\mu sec$
- Sensitive gate for direct microprocessor interface
- Through-hole and surface-mount packages
- RoHS compliant and Halogen-Free

Applications

The SxX8xSx EV series is specifically designed for Ground Fault Circuit Interrupter (GFCI) and gas ignition applications.

## 9. Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including  $dv/dt$ ), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
