## Description

The SKY13319-374LF is a pHEMT GaAs FET I/C high-power switch. The switch is an ideal choice for two-way radios, WiMAX, and WLAN applications where low loss, high isolation, and excellent linearity are key requirements.

The switch is manufactured in a compact, 1.5 x 1.5 mm, 6-pin exposed pad plastic Micro Leadframe Package Dual (MLPD) package.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

**Table 1. SKY13319-374LF Signal Descriptions**

Pin	Name	Description	Pin	Name	Description
1	J1	RF output <sup>1</sup>	4	V2	DC control voltage
2	GND	Ground	5	RFC	RF common input (Note 1)
3	J2	RF output <sup>1</sup>	6	V1	DC control voltage

<sup>1</sup> A 47 pF blocking capacitor is required for >1 GHz operation. Use larger value capacitors for lower frequency operation.

### Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13319-374LF are provided in Table 2. The recommended operating conditions are specified in Table 3 and electrical specifications are provided in Table 4.

Typical performance characteristics of the SKY13319-374LF are illustrated in Figures 3 through 7.

The state of the SKY13319-374LF is determined by the logic provided in Table 5.

**Table 2. SKY13319-374LF Absolute Maximum Ratings<sup>1</sup>**

<sup>1</sup> Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**ESD HANDLING:** *Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.*
