

## **DATA SHEET**

# SKY65095-360LF: 1600 to 2100 MHz Low-Noise Power Amplifier Driver

## **Applications**

- 2.5G, 3G, 4G wireless infrastructure transceivers
- ISM band transmitters
- WCS fixed wireless
- 3GPP LTE

## **Features**

- Wideband frequency range: 1600 to 2100 MHz
- Low noise figure: 4.5 dB
- High IIP3 up to +32 dBm
- Output P1dB = +28.5 dBm
- High gain: +14.5 dBm
- Single DC supply: +5 V
- Enable voltage: +3.3 V
- · On-chip bias circuit
- DFN (8-pin, 2 x 2 mm) package (MSL1, 260 °C per JEDEC J-STD-020)

Skyworks Green<sup>™</sup> products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green*<sup>™</sup>, document number SQ04–0074.

Figure 1. SKY65095-360LF Functional Block Diagram

### **Description**

The Skyworks SKY65095-360LF is a high-performance, ultra-wideband power amplifier (PA) driver with superior output power, low noise, and linearity. The device provides excellent noise figure (NF) and high output power at 1 dB compression, which makes the SKY65095-360LF ideal for use in the driver stage of infrastructure transmit or receive chains.

The SKY65095-360LF uses low-cost surface-mount technology (SMT) in the form of an 8-pin, 2 x 2 mm Dual Flat No-Lead (DFN) package. A functional block diagram is provided in Figure 1, and the device package and pinout are shown in Figure 2. Signal pin assignments and functional pin descriptions are described in Table 1.

| Pin | Name                             | Description                | Pin | Name        | Description                |
|-----|----------------------------------|----------------------------|-----|-------------|----------------------------|
| 1   | 1 GND Ground                     |                            | 5   | N/U         | Not used (may be grounded) |
| 2   | RF_IN                            | RF input                   | 6   | ENABLE      | PA enable                  |
| 3   | 3 N/U Not used (may be grounded) |                            | 7   | RF_OUT/BIAS | RF output/bias voltage     |
| 4   | N/U                              | Not used (may be grounded) | 8   | N/U         | Not used (may be grounded) |

Table 1. SKY65095-360LF Signal Descriptions

### **Technical Description**

The SKY65095-360LF is a single-stage, low-noise PA that operates with a single 5 V power supply connected through an RF choke (inductor L1) to the output signal (pin 7). The bias current is set by the on-chip active bias composed of current mirror and reference voltage transistors, which allow excellent gain tracking over temperature and voltage variations. The device is externally RF matched using surface-mount components to facilitate operation over a frequency range of 1600 to 2100 MHz.

### **Electrical and Mechanical Specifications**

The absolute maximum ratings of the SKY65095-360LF are provided in Table 2. The recommended operating conditions are specified in Table 3 and electrical specifications are provided in Table 4 (general specifications), Table 5 (1626 to 1660 MHz), Table 6 (1710 to 1780 MHz), Table 7 (1850 to 1910 MHz), Table 8 (1920 to 1980 MHz), and Table 9 (2010 to 2025 MHz).

Typical performance characteristics of the SKY65095-360LF are illustrated in Figures 3 through 13 (1626 to 1660 MHz), Figures 14 through 24 (1710 to 1785 MHz), Figures 25 through 44 (1850 to 1910 MHz), Figures 45 through 55 (1920 to 1980 MHz), and Figures 56 through 66 (2010 to 2025 MHz).

#### Table 2. SKY65095-360LF Absolute Maximum Ratings<sup>1</sup>

| Parameter   | Symbol | Minimum | Maximum | Units |
|---|--------|---------|---------|-------|
| Supply voltage                                    | Vcc    | -0.3    | +6.0    | V     |
| RF input power                                    | Pin    |         | +20     | dBm   |
| Supply current @ P1dB                             | lcc    |         | 400     | mA    |
| Power dissipation @ P1dB                          | Po     |         | 1.1     | W     |
| Power dissipation @ $P_{IN} = -10 \text{ dBm}$    | Po     |         | 0.7     | W     |
| Operating case temperature                        | Tc     | 0       | +70     | °C    |
| Extended operating temperature                    | Техт   | -33     | +95     | °C    |
| Storage temperature                               | Тѕт    | -55     | +150    | °C    |
| Junction temperature @ $P_{IN} = -10 \text{ dBm}$ | TJ     |         | +150    | °C    |
| Thermal resistance @ $P_{IN} = -10 \text{ dBm}$   | OJC    |         | 35      | °C/W  |

Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal values. Exceeding any of the limits listed here may result in permanent damage to the device.

**ESD HANDLING**: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.

| Parameter           | Symbol | Min  | Тур  | Мах  | Units |
|---------------------|--------|------|------|------|-------|
| Bias voltage        | Vcc    | 4.75 | 5.00 | 5.25 | V     |
| Enable voltage      | Ven    |      | 3.3  |      | V     |
| Operating frequency | f      | 1600 |      | 2100 | MHz   |

Table 3. SKY65095-360LF Recommended Operating Conditions

Table 4. SKY65095-360LF Electrical Characteristics: General Specifications<sup>1</sup> (Vcc = +5 V, T<sub>J</sub> = 25 °C, CW, Unless Otherwise Noted)

| Parameter                       | Symbol  | Test Conditions                              | Min           | Typical | Max   | Units |
|---------------------------------|---------|--|---------------|---------|-------|-------|
| Quiescent current               | la      | No RF  |               | 135     | 145   | mA    |
| Gain vs temperature             |         |  | -0.02         |         | +0.02 | dB/°C |
| 0.1 dB output compression point | OP0.1dB | Sweep input power                            | +22           |         |       | dBm   |
| Turn-on time                    |         |  |               | 1       |       | μs    |
| Stability                       |         | $P_{IN} = 0 \text{ dBm}, T_J = 0 \text{ °C}$ | Unconditional |         | -     |       |

<sup>1</sup> Performance is guaranteed only under the conditions listed in this table, and corresponds to the Bill of Materials in Table 10 for each frequency band.

# Table 5. SKY65095-360LF Electrical Characteristics: 1626 to 1660 $MHz^1$ (Vcc = +5 V, TJ = 25 °C, f = 1643 MHz, CW, Unless Otherwise Noted)

| Parameter                         | Symbol | Test Conditions                      | Min  | Тур   | Мах  | Units |

## **Evaluation Board Description**

The Skyworks SKY65095-360LF Evaluation Board is used to test the performance of the SKY65095-360LF PA driver. An assembly drawing for the Evaluation Board is shown in Figure 67 and the layer detail is provided in Figure 68. The layer detail physical characteristics are noted in Figure 69.

Capacitor C10 provides DC bias decoupling for the output stage collector voltage. Pins 2 and 7 are the RF input and output signals, respectively. External DC blocking is required on the input and output, but can be implemented as part of the RF matching circuit. Ground pin 1 and the center ground pad provide the DC and RF ground.

A suggested matching circuit is shown in Figure 70 with component values for the SKY65095-360LF Evaluation Board listed in Table 10.

### **Testing Procedure**

Use the following procedure to set up the SKY65095-360LF Evaluation Board for testing:

- Connect a 5.0 V supply to the VCC pin and 3.3 V to the ENABLE pin of the J3 header (see Evaluation Board assembly drawing in Figure 67 and schematic diagram in Figure 70). If available, enable the current limiting function of the power supply to 500 mA.
- Connect a signal generator to the RF signal input port. Set it to the desired RF frequency at a power level of -15 dBm or less to the Evaluation Board but do NOT enable the RF signal.
- 3. Connect a spectrum analyzer to the RF signal output port.
- 4. Enable the power supply.
- 5. Enable the RF signal.
- 6. Take measurements.

### **Circuit Design Configurations**

The following design considerations are general in nature and must be followed regardless of final use or configuration.

- Paths to ground should be made as short as possible.
- The ground pad of the SKY65095-360LF power amplifier has special electrical and thermal grounding requirements. This pad is the main thermal conduit for heat dissipation. Since the circuit board acts as the heat sink, it must shunt as much heat as possible from the amplifier.

Therefore, design the connection to the ground pad to dissipate the maximum wattage produced to the circuit board. Multiple vias to the grounding layer are required.

- **NOTE:** Junction temperature (Tj) of the device increases with a poor connection to the slug and ground. This reduces the lifetime of the device.
- **CAUTION**: If any of the output signals exceed the rated maximum values, the SKY65095-360LF Evaluation Board can be permanently damaged.

### Table 10. SKY65095-360LF (DFN Package) Evaluation Board Bill of Materials (2 of 2)

## **Package Dimensions**

The PCB layout footprint for the SKY65095-360LF is shown in Figure 71. Package dimensions are shown in Figure 72, and tape and reel dimensions are provided in Figure 73.

## **Package and Handling Information**

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY65095-360LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Figure 71. SKY65095-360LF PCB Layout Footprint

#### DATA SHEET • SKY65095-360LF: 1600 TO 2100 MHz LOW-NOISE POWER AMPLIFIER DRIVER

All measurements are in millimeters.

Dimensioning and tolerancing according to ASME Y14.5M-1994. Coplanarity applies to the exposed heat sink slug as well as the terminals..

Plating requirement per source control drawing (SCD) 2504. Dimension applies to metalized terminal and is measured between 0.15 mm and 0.30 mm from terminal tip.

S1415

7. All measurements are in millimeters.
