

SPT Series

Low Cost, Stainless Steel Media Isolated Pressure Sensors

DESCRIPTION

Honeywell's SPT Series stainless steel pressure sensors are designed for media that will not adversely attack 316L stainless steel.

The back side metal tube is made from 304 stainless steel which provides effective protection against most harsh environments. The SPT Series is calibrated and compensated for three styles of output: 4.0 mA to 20.0 mA (mA version); 1.0 Vdc to 5.0 Vdc (4 V version); and 0 mV to 100 mV (mV version).

FEATURES

- Reliable semiconductor technology
- Calibrated and temperature compensated
- Rugged, stainless steel package
- NEMA 4 design
- Small size
- Absolute, gage, sealed gage, vacuum gage pressures
- 0 psi to 3 psi, 0 psi to 5000 psi

All versions feature a variety of pressure connections to allow use in a wide range of OEM (Original Equipment Manufacturer) equipment.

The SPT Series stainless steel devices are rugged and reliable transducers for use in a wide variety of pressure sensing applications where corrosive liquids and gases are monitored.

POTENTIAL APPLICATIONS

- Industrial automation and flow control
- Pressure instrumentation
- Hydraulic systems
- Process control

Table 1. Specifications

Characteristic	Parameter
Environmental specifications	
Compensated temperature range	-10 °C to 85 °C [14 °F to 185 °F]
Operating temperature range	-40 °C to 85 °C [-40 °F to 185 °F]
Storage temperature range	-40 °C to 85 °C [-40 °F to 185 °F]
Vibration	10 G at 20 Hz to 2000 Hz
Shock	100 G for 11 ms
Insulation resistance	100 MΩ at 50 Vdc
Recommended supply range	
SPT mA supply voltage	+12.5 Vdc to +24 Vdc
SPT 4V	
Supply voltage V_s	+12.5 Vdc to +24 Vdc
Quiescent current I_{osc}	5 mA
Short circuit current I_{sc}	18 mA
SPT mV supply voltage V_s	+10 Vdc
Maximum supply ratings	
SPT mV supply voltage V_s	+15 Vdc
SPT mA and SPT 4V supply voltage V_s	+24 Vdc

Notes:

1. Vacuum gage units (V option) allow you to pull a hard vacuum on the gage units. Vacuum gage parts are only available on the mV version in 15 psig through 500 psig. As sold, this package design is not submersible. In order to make the package submersible, the package needs to be sealed.
2. The maximum pressure that can be applied without changing the transducer's performance or accuracy.
3. The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer case.

Notes:

- Reference conditions (unless otherwise noted): $T_A = 25\text{ °C}$ [77 °F]; For SPTmA and SPT4V, Supply $V_S = 23.5\text{ Vdc} \pm 0.01\text{ Vdc}$; for SPTmV: $V_S = 10\text{ Vdc}$.
- Full-scale span (FSS) is the algebraic difference between the output voltage at full-scale positive pressure and the output at zero pressure. FSS is ratiometric to the supply voltage.
- Pressure non-linearity is based on best-fit straight line from zero to the full-scale pressure. Pressure hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure.
- Maximum error band of the offset voltage or span over the compensated temperature range, relative to the 25 °C [77 °F] reading.
- Long-term stability over a six-month period.
- Response time for a 0 psi to FSS pressure step change, 10% to 90% rise time.
- Common mode voltage as measure from output to ground.
