

### SVxx20xx Series

#### Main Features

Symbol	Value	Unit
$I_{TRMS}$	20	A
$V_{DRM}/V_{RRM}$	600	V
$I_{GT}$	6 or 10	mA

#### Description

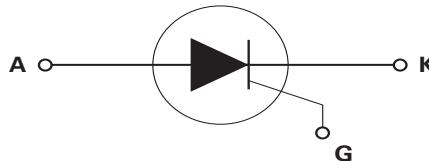

This SVxx20xx high temperature SCR series is ideal for uni-directional switch applications such as phase control in heating, motor speed controls, converters/rectifiers and inrush current controllers.

These SCRs have a low gate current trigger level of 6 mA or 10 mA maximum at approximately 1.5 V.

#### Features & Benefits

- Halogen free and RoHS compliant
- Surge capability up to 300A at 60 Hz half cycle
- 150 °C maximum junction temperature
- High dv/dt performance

#### Schematic Symbol

#### Applications

Typical applications include AC Generator (ACG) rectifiers, battery voltage regulators, generic converters and inrush current controller in various AC to DC applications. Additional applications include controls for power tools, home/brown good and white goods appliances.

Internally constructed isolated packages offered for ease of heat sinking with high isolation voltage.

#### Absolute Maximum Ratings – 20A SCR

### Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including dv/dt), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
