

PROTECTION PRODUCTS

Description

TClamp®2512N and TClamp3312N are specifically designed to provide secondary surge and ESD protection for Ethernet and telecom interfaces. They integrate low capacitance, surge-rated steering diodes with a high power transient voltage suppressor (TVS) to provide up to 120A (tp=8/20us) of lightning surge protection. Capacitance is limited to 8pF maximum from line-to-line to ensure correct signal transmission on high-speed lines.

TClamp2512N and TClamp3312N are in a 10-pin SLP2626P10 package measuring 2.6 x 2.6 x 0.60mm. Leads are spaced at a pitch of 0.5mm and are finished with lead-free NiPdAu. They may be used to meet Telcordia GR-1089-CORE short-haul (intra-building) surge requirements and are particularly well suited for applications where board space is at a premium such as integrated connectors/magnetics and carrier class Ethernet equipment.
