4 Overview

The Trenz Electronic TE0745 is an industrial/commercial/extended grade module integrating a Xilinx Zynq SoC (XC7Z-030, XC7Z-035 or XC7Z-045), 1 GByte DDR3/L SDRAM, 32/64 MByte SPI Flash memory for configuration and operation and powerful switch-mode power supplies for all on-board voltages. A large number of configurable I/O's is provided via rugged high-speed stacking strips.

Refer to <http://trenz.org/te0745-info> for the current online version of this manual and other available documentation.

4.1 Key Features

- Industrial grade Xilinx Zynq SoC (XC7Z030, XC7Z035, XC7Z045)
 - 250 FPGA PL I/Os (120 LVDS pairs possible)
 - 17 PS MIOs on B2B connector available
- Dual-core ARM Cortex-A9 MPCore™ with CoreSight™
- 32 (2x16)-bit wide 1GB DDR3L SDRAM
- 32/64 MByte QSPI Flash memory
- 4 or 8 GTX transceiver lanes (XC7Z030 variant has 4)
- 1 Gigabit Ethernet transceiver PHY
- Two User LEDs
- EEPROM for storing Ethernet MAC Address
- Hi-speed USB 2.0 ULPI transceiver with full OTG support
- Programmable quad clock generator
- Temperature compensated RTC (real-time clock)
- Board to Board (B2B)
 - Plug-on module with 3 × 160-pin high-speed connectors
- Power Supply
 - 12 V
- Others:
 - On-board high-efficiency DC-DC converters
 - System management
 - eFUSE bit-stream encryption
 - AES bit-stream encryption
 - Evenly-spread supply pins for good signal integrity
 - Rugged for shock and high vibration

Additional assembly options are available for cost or performance optimization upon request.

4.3 Main Components

Figure 2: TE0745 main components

1. Xilinx Zynq XC7Z family SoC, U1
2. Quad SPI Flash memory, U14
3. Reference clock signal oscillator, U12

4. Reference clock signal oscillator, U9
5. 1 Gigabit Ethernet PHY, U7
6. DDR3L SDRAM (8 Banks a 32 MWords, 16-bit word width), U3
7. DDR3 memory termination regulator with buffered reference voltage VTTREF, U18
8. Real-Time-Clock, U24
9. level-shifting I²C bus repeater, U17
10. Red LED, D2
11. Green LED, D1
12. DDR3L SDRAM (8 Banks a 32 MWords, 16-bit word width), U5
13. 12A DC-DC PowerSoC (VCCINT), U4
14. DC-DC regulator (MGTAVTT), U8
15. DC-DC regulator (MGTAUX), U6
16. DC-DC regulator (MGTAVCC), U11
17. I²C Programmable Quad Clock Generator, U13
18. Reference clock signal oscillator, U21
19. B2B Connector, J3
20. B2B Connector, J1
21. B2B Connector, J2
22. Quad SPI Flash memory, U14
23. USB transceiver PHY , U32
24. Reference clock signal oscillator, U33
25. EEPROM for MAC address, U23
26. System Controller CPLD, U2

4.4 Initial Delivery State

Storage device name	Content	Notes
EEPROM	User content, not programmed	Valid MAC Address from manufacturer.
SPI Flash OTP Area	not programmed	Except serial number programmed by flash vendor.
SPI Flash Quad Enable bit	Programmed	-

Storage device name	Content	Notes
SPI Flash main array	Not programmed	-
eFUSE USER	Not programmed	-
eFUSE Security	Not programmed	-
Si5338 OTP NVM	Not programmed	OTP not re-programmable after delivery from factory

Table 1: Initial delivery state of programmable devices on the module

4.5 Configuration Signals

BOOTMODE is connected to MIO4 and B2B Connector J2 (Pin 133) and BOOTMODE_1 is connected to MIO5 and System Controller CPLD and default high.

Boot Mode	BOOTMODE_1 (MIO5)	BOOTMODE (MIO4)	Note
JTAG Boot mode	0	0	JTAG only is only possible with other CPLD Firmware
----	0	1	not supported
QSPI	1	0	
SD Card	1	1	

Table 2: Boot process.

Signal	B2B	Direction	Note
RST_I N_N	J2-1 31	Input	Low-active Power-On reset pin, controls POR_B-signal (Bank 500 - C23)
PS_SR ST	J2-1 52	Input	Low-active PS system-reset pin of Zynq chip.
JTAG_ EN	J1-1 48	Input	Low FPGA access, high CPLD access

Table 3: Control Pins

5 Signals, Interfaces and Pins

5.1 Board to Board (B2B) I/Os

FPGA bank number and number of I/O signals connected to the B2B connector:

FPGA Bank	Type	B2B Connector	I/O Signal Count	Voltage Level	Notes
12	HR	J1	48 Diff (24 LVS pair), 2 Single ended	VCCIO_1 2 pins J1-54, J1-55	Voltage range 1.2V to 3.3V
13	HR	J1	48 Diff (24 LVS pair), 2 Single ended	VCCIO_1 3 pins J1-112, J1-113	Voltage range 1.2V to 3.3V
33	HP	J3	48 Diff (24 LVS pair), 2 Single ended	VCCIO_3 3 pins J3-115, J3-120	Voltage range 1.2V to 1.8V
34	HP	J2	48 Diff (24 LVS pair), 2 Single ended	VCCIO_3 4 pins J2-29, J2-30	Voltage range 1.2V to 1.8V

FPGA Bank	Type	B2B Connector	I/O Signal Count	Voltage Level	Notes
35	HP	J2	48 Diff (24 LVS pair), 2 Single ended	VCCIO_3 5 pins J2-87, J2-88	Voltage range 1.2V to 1.8V
500	MIO	J2	5	1.8V	MIO0, MIO12 ... MIO15, user configurable I/O's on B2B
501	MIO	J3	12	1.8V	MIO40 ... MIO51, user configurable I/O's on B2B

Table 4: General PL I/O to B2B connectors information

5.2 System Controller I/O Pins

Pin Name	Direction	Function	B2B	Default Configuration
JTAG_EN	Input	JTAG select	J1 -1 48	During normal operating mode the JTAG_EN pin should be in the low state for JTAG signals to be forwarded to the Zynq SoC. If JTAG_EN pin is set to high or left open the JTAG signals are forwarded to the System Controller CPLD.
RST_IN_N	Input	Reset	J2 -1 31	Low-active Power-On reset pin, controls POR_B-signal (bank 500, pin C23) of Zynq chip.

Pin Name	Direction	Function	B2B	Default Configuration
PS_SRS_T	Input	Reset	J2-152	Low-active PS system-reset pin of Zynq chip.
BOOTMODE	Input	Boot mode	J2-133	Control line which sets in conjunction with signal 'BOOTMODE_1' connected to CPLD(BOOTMODE_1 default high) the boot source of the Zynq chip. See section "Configuration Signals".
PWR_PL_OK	Input	Power good	J2-135	Indicates stable state of PL supply voltage (low-active) after power-up sequence.
PWR_PS_OK	Input	Power good	J2-139	Indicates stable state of PS supply voltage (low-active) after power-up sequence.
MIO0	Input	PS MIO	J2-137	User I/O also connected to CPLD.

Table 5: System Controller CPLD pins connection over B2B
JTAG Interface

JTAG interface access is provided through the SoC's PS configuration bank 0, it is connected to B2B connector J1.

JTAG Signal	B2B Connector
TMS	J1- 144
TDI	J1- 142
TDO	J1- 145
TCK	J1- 143

JTAG Signal	B2B Connector
JTAG_EN	J1- 148

Table 6: JTAG pins connection

5.3 I2C Interface

The I²C interface on B2B connector J2 has PS_3.3V as reference voltage and is connected to the Zynq SoC via voltage level translating (3.3V ↔ 1.8V) I²C bus repeater (U17).

Schematic	B2B	Notes
I2C_33_SCL	J2-119	3.3V reference voltage
I2C_33_SDA	J2-121	3.3V reference voltage

Table 7: Pin assignment of the B2B I2C interface.

Following on-module I²C interface are connected to the same I2C bus:

I2C Device	I2C Address	Notes
Quad programmable PLL clock generator U16: pins 12 (SCL), 19 (SDA)	0x70	-
MAC Address EEPROM U23, pins 1 (SCL), 3 (SDA)	0x53	-
SC CPLD U2, bank 2, pins 16 (SDA), 17 (SCL)	User programmable.	-
RTC, U24	0x6F	-
RTC RAM, U24	0x57	-

Table 8: MIO-pin assignment of the on-module I2C interface.

I2C bus is accessible from SoC over following MIO:

MIO Pin	Signal Schematic Name	Notes
MIO 10	I2C_SCL	1.8V reference voltage
MIO 11	I2C_SDA	1.8V reference voltage

Table 9: Module's I2C-Slave address overview.

5.4 MGT Lanes

1) **Note:** MGT bank 111 not available at XC7Z030 Zynq SoC.

5.5 MIO Pins

MIO Pin	Connected to	B2 B	Notes
MIO0	CPLD and B2B J2-137	J2	Configurable, def. used for SD CD
MIO1... 6	SPI_CS , SPI_DQ0... SPI_DQ3, SPI_SCK	-	QSPI Flash
MIO7	USB_RESET_N	-	10k pullup to PS_1.8V
MIO8	Used for CPLD Status	-	10k pullup to PS_1.8V
MIO9	ETH_PHY_RST_N	-	ETH PHY
MIO10. ...11	SCL/SDA	-	I2C
MIO12. ..13	-	J2	Configurable, def GPIO
MIO13. ..14	UART		Configurable, def. used for UART
MIO16. ..27	ETH_TXCK, ETH_TXD0..3, ETH_TXCTL ETH_RXCK, ETH_RXD0..3, ETH_RXCTL	-	Ethernet Signals

MIO Pin	Connected to	B2 B	Notes
MIO28.. 39	OTG_DATA4, OTG_DIR, OTG_STP, OTG_NXT, OTG_DATA0...3, OTG_CLK, OTG_DATA5...7	-	USB
MIO40.. 45	MIO40..45	J3	Configurable, def. used for SD
MIO46.. 50	-	J3	GPIO
MIO51	I2C Reset	J3	Configurable, def. used for I2C Reset
MIO52	PHY_MDC	J3	ETH PHY
MIO53	PHY_MDIO	J3	ETH PHY

Table 11: MIOs pins

6 On-board Peripherals

Chip/Interface	Designator	Notes
Quad SPI Flash Memory(see page 20)	U14	
DDR3 SDRAM(see page 21)	U3, U5	
RTC(see page 21)	U24	
EEPROM(see page 24)	U23	
System Controller CPLD(see page 23)	U2	
Ethernet PHY(see page 24)	U7	
USB ULPI PHY(see page 24)	U32	
Programmable PLL Clock(see page 22)	U16	
LEDs(see page 25)	D1, D2	
Oscillators(see page 26)	U21, U12, U33, U9	

Table 12: On board peripherals

6.1 Quad SPI Flash Memory

On-board QSPI flash memory (U14) on the TE0745-02 is provided by Micron Serial NOR Flash Memory 256/512 Mbit (32/64 MByte) storage capacity. This non volatile memory is used to store initial FPGA configuration. Besides FPGA configuration, remaining free flash memory can be used for user application and data storage. All four SPI data lines are connected to the FPGA allowing x1, x2 or x4 data bus widths. Maximum data rate depends on the selected bus width and clock frequency used. Quad SPI Flash (U14) is connected to the Zynq PS QSPI0 interface via PS MIO bank 500, pins MIO1 ... MIO6.

MIO Pin	Schematic	Notes
MIO1	SPI-CS	
MIO2	SPI-DQ0/M0	
MIO3	SPI-DQ1/M1	

MIO Pin	Schematic	Notes
MIO4	SPI-DQ2/M2	
MIO5	SPI-DQ3/M3	
MIO6	SPI-SCK/M4	

Table 13: Quad SPI interface MIOs and pins

6.2 DDR3 SDRAM

The TE0745 SoM has two volatile Intelligent Memory 512 MByte DDR3L-1600 SDRAM IC for storing user application code and data.

- Part number: IM4G16D3FABG-125I
- Supply voltage: 1.5V
- Organization: 256M x 16 bits

DDR3 SDRAM can be varied on demand for other assembly options. DDR3 can have density of maximum 512MB due to available addressing. The maximum possible speed for DDR3 SDRAM is 1600 Mb/s.

6.3 RTC

An temperature compensated is used as Real Time Clock (U24). Battery voltage must be supplied to the clock from the base board via pin 'VBAT_IN' (J1-146). Battery backed registers can be accessed over I²C bus at slave address mentioned in the table below. General purpose RAM of the RTC can be accessed at I²C slave address 0x57. RTC IC is supported by Linux so it can be used as hwclock device.

The interrupt line 'RTC_INT' of the RTC is connected to System Controller CPLD bank 3 pin 4.

Schematic	B2B	I2C Address	Designator	Notes
I2C_33_SCL	J2-119	0x6F	U24	
I2C_33_SDA	J2-121			

Table 14: I2C Address for RTC

6.4 Programmable PLL Clock

There is a Silicon Labs I²C programmable quad PLL clock generator (U16) on-board. It's output frequencies can be programmed by using the I²C-bus with address 0x70.

A 25.00 MHz (U21) oscillator is connected to pin 3 (IN3) and is used to generate the output clocks.

Once running, the frequency and other parameters can be changed by programming the device using the I²C-bus connected between the Zynq module (master) and reference clock signal generator (slave).

U16 Pin	Signal Name / Description	Connected To	Direction	Default	Note
IN1	CLKIN_P	B2B, J3-76	Input		Reference input clock from base board.
IN2	CLKIN_N	B2B, J3-74	Input		
IN3	Reference input clock.	Oscillator U21, pin 3	Input		25.000000 MHz oscillator, Si8008BI.
IN4	-	GND	Input		I ² C slave device address LSB (0x70 default address).
IN5	-	Not connected.	Input		Not used.
IN6	-	GND	Input		Not used.
CLK0A	MGT_CLK1_P	Zynq Soc U1, pin U6	Output	Not programmed	MGT bank 112 reference clock.

U1 6 Pin	Signal Name / Descriptio n	Conne cted To	Dire ctio n	Defa ult	Note
CLK 0B	MGT_CLK1 _N	Zynq Soc U1, pin U5	Out put	Not progr amm ed	
CLK 1A	CLK1_P	B2B, J3-80	Out put	Not progr amm ed	Reference clock output to base board.
CLK 1B	CLK1_N	B2B, J3-82	Out put	Not progr amm ed	
CLK 2A	CLK2_P	B2B, J3-86	Out put	Not progr amm ed	Reference clock output to base board.
CLK 2B	CLK2_P	B2B, J3-88	Out put	Not progr amm ed	
CLK 3A	MGT_CLK3 _P	Zynq Soc U1, pin AA6	Out put	Not progr amm ed	MGT bank 111 reference clock.
CLK 3B	MGT_CLK3 _N	Zynq Soc U1, pin AA6	Out put	Not progr amm ed	

Table 15: Programmable quad PLL clock generator inputs and outputs.

6.5 System Controller CPLD

The System Controller CPLD (U2) is central system management unit where essential control signals are logically linked by the implemented logic in CPLD firmware, which generates output signals to control the system, the on-board peripherals and the interfaces. Interfaces like JTAG and I²C between the on-

board peripherals and to the FPGA-module are by-passed, forwarded and controlled by the System Controller CPLD.

Other tasks of the System Controller CPLD are the monitoring of the power-on sequence and to display the programming state of the FPGA module.

For current CPLD Firmware description, check [TE0745 CPLD](#)¹

6.6 USB ULPI PHY

Hi-speed USB ULPI PHY (U32) is provided on the board. The ULPI interface is connected to the Zynq PS USB0 via MIO28..39, bank 501 (see also section). The I/O voltage is fixed at 1.8V and PHY reference clock input is supplied from the on-board 52.00 MHz oscillator (U33).

6.7 MAC Address EEPROM

A serial EEPROM (U23) contains a globally unique 48-bit node address, which is compatible with EUI-48(TM) specification. The device is organized as two blocks of 128 x 8-bit memory. One of the blocks stores the 48-bit node address and is write protected, the other block is available for application use.

6.8 EEPROM

Schematic	MIO	I2C Address	Designator	Notes
I2C_SCL	MIO10	0x53	U23	
I2C_SDA	MIO11			

Table 16: I2C address for EEPROM

6.9 Ethernet PHY

On-board Gigabit Ethernet PHY (U7) is provided on the board. The Ethernet PHY RGMII interface is connected to the Zynq Ethernet0 PS GEM0. I/O voltage is fixed at 1.8V for HSTL signaling. The reference clock input of the PHY is supplied from an on-board 25.00 MHz oscillator (U9), the 125MHz output clock signal CLK_125MHZ is connected to the pin J2-150 of B2B connector J2.

Schematic	B2B	Notes
PHY_MDIO	-	Connected to MIO52

6.11 Clock Sources

Designator	Schematic Name	Frequency	Note
U21	-	25.00 MHz	Quad PLL clock generator U16, pin 3
U12	PS_CLK	33.33 MHz	Bank 500 (MIO0 bank), pin B24
U33	OTG-RCLK	52.00 MHz	USB 2.0 transceiver PHY U32, pin 26
U9	ETH_CLKIN	25.00 MHz	Gigabit Ethernet PHY U7, pin 34

Table 19: Osillators

7 Power and Power-On Sequence

7.1 Power Supply

Power supply with minimum current capability of 3.0 A for system startup is recommended.

7.2 Power Consumption

The maximum power consumption of a module mainly depends on the design which is running on the FPGA.

Power Input Pin	Typical Current
PL_VIN	TBD*
PS_VIN	TBD*
PS_3.3V	TBD*

Table 20: Power Consumption

* TBD - To Be Determined

For the lowest power consumption and highest efficiency of on board DC-DC regulators it is recommended to powering the module from one single 3.3V supply. All input power supplies have a nominal value of 3.3V. Although the input power supplies can be powered up in any order, it is recommended to power them up simultaneously.

The on-board voltages of the TE0745 SoC module will be powered-up in order of a determined sequence after the external voltages 'PL_VIN', 'PS_VIN' and 'PS_3.3V' are available. All those power-rails can be powered up, with 3.3V power sources, also shared.

 To avoid any damage to the module, check for stabilized on-board voltages should be carried out (i.e. power good and enable signals) before powering up any SoC's I/O bank voltages VCCO_x. All I/Os should be tri-stated during power-on sequence.

Core voltages and main supply voltages have to reach stable state and their "Power Good"-signals have to be asserted before other voltages like PL bank's I/O voltages can be powered up.

It is important that all baseboard I/Os are tri-stated at power-on until the "Power Good"-signals 'PWR_PS_OK' (J2-139) and 'PWR_PL_OK' (J2-135) are high, meaning that all on-module voltages have become stable and module is properly powered up.

7.3 Power Distribution Dependencies

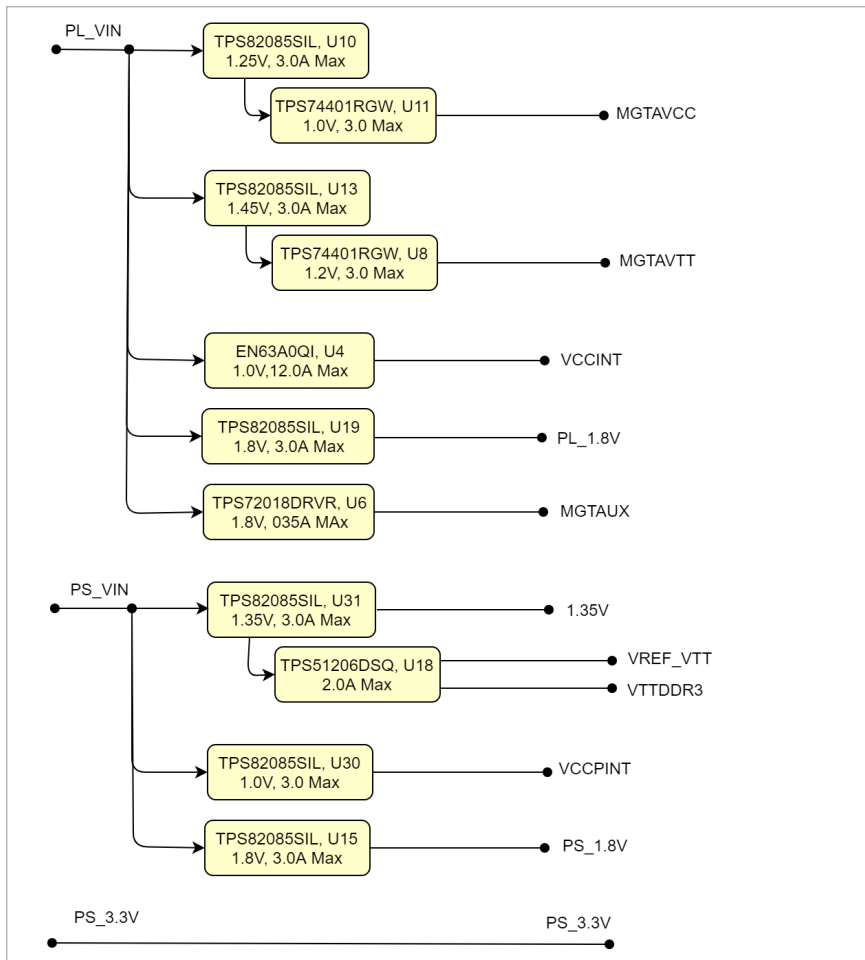

Figure 3: Power Distribution

⚠ Current rating of Samtec Razor Beam LP Terminal/Socket Strip ST5/SS5 B2B connectors is 1.5 A per pin (1 pin powered per row).

7.4 Power-On Sequence

The TE0745 SoM meets the recommended criteria to power up the Xilinx Zynq MPSoC properly by keeping a specific sequence of enabling the on-board DCDC converters dedicated to the particular functional units of the Zynq chip and powering up the on-board voltages.

Following diagram clarifies the sequence of enabling the particular on-board voltages, which will power-up in descending order as listed in the blocks of the diagram:

Figure 4: Power Sequency

The Enable-Signal 'EN_PL' is permanently logic high in standard SC-CPLD firmware. The "Power Good"-signals 'PWR_PS_OK' and 'PWR_PL_OK' (latter low-active, extern pull-up needed) are available B2B-connector J2 (pins J2-139, J2-135) and on the SC-CPLD.

7.5 Voltage Monitor Circuit

The voltages 'VCCPINT' and 'PS_1.8V' are monitored by the voltage monitor circuit U41, which generates the POR_B reset signal at Power-On. A manual reset is also possible by driving the MR-pin (available on J2-131 or SC-CPLD) to GND. Leave this pin unconnected or connect to VDD (PS_1.8V) when unused.

Figure 5: Voltage Monitor Circuit

7.6 Power Rails

Power Rail Name	B2B Connector	B2B Connector	B2B Connector	Direction	Notes
	JM1 Pin	JM2 Pin	JM3 Pin		
PL_VIN	147, 149, 151, 153, 155, 157, 159	-	-	Input	module supply voltage
PS_VIN	-	154, 156, 158	-	Input	module supply voltage
PS_3.3V	-	160	-	Input	module supply voltage
VCCIO12	54, 55	-	-	Input	high range bank I/O voltage
VCCIO13	112, 113	-	-	Input	high range bank I/O voltage
VCCIO33	-	-	115, 120	Input	high performance bank I/O voltage
VCCIO34	-	29, 30	-	Input	high performance bank I/O voltage
VCCIO35	-	87, 88	-	Input	high performance bank I/O voltage

Power Rail Name	B2B Connector	B2B Connector	B2B Connector	Direction	Notes
	JM1 Pin	JM2 Pin	JM3 Pin		
VBAT_IN	146	-	-	Input	RTC (battery-backed) supply voltage
PS_1.8V	-	130	-	Output	internal 1.8V voltage level (Process System)
PL_1.8V	-	-	84,85	Output	internal 1.8V voltage level (FPGA)

Table 21: Module power rails.

7.7 Bank Voltages

Bank	Schematic Name	Voltage	Notes
0 (config)	VCCIO_0	PL_1.8V, if R67 is equipped PS_1.8V, if R68 is equipped	-
500 (MIO0)	PS_1.8V	1.8V	-
501 (MIO1)	PS_1.8V	1.8V	-
502 (DDR3)	1.35V	1.35V	-

Bank	Schematic Name	Voltage	Notes
12 HR	VCCIO_12	User	HR: 1.2V to 3.3V
13 HR	VCCIO_13	User	HR: 1.2V to 3.3V
33 HP	VCCIO_33	User	HP: 1.2V to 1.8V

Table 22: Zynq SoC bank voltages.

9 Technical Specifications

9.1 Absolute Maximum Ratings

Symbols	Description	Min	Max	Unit
PL_VIN	-0.3	5	V	TI TPS720 data sheet
PS_VIN	-0.3	7	V	TI TPS82085 data sheet
PS_3.3V	3.135	3.465	V	3.3V nominal ± 5%
VBAT supply voltage	-1	6.0	V	ISL12020MIRZ data sheet
PL IO bank supply voltage for HR I/O banks (VCCO)	-0.5	3.6	V	-
PL IO bank supply voltage for HP I/O banks (VCCO)	-0.5	2.0	V	-
I/O input voltage for HR I/O banks	-0.4	VCCO_X+0.55	V	-
I/O input voltage for HP I/O banks	-0.55	VCCO_X+0.55	V	-
GT receiver (RXP/RXN) and transmitter (TXP/TXN)	-0.5	1.26	V	-

Symbols	Description	Min	Max	Unit
Voltage on module JTAG pins	-0.3	3.6	V	MachX02 Family data sheet
Storage temperature	-40	+128	°C	Limits of ISL12020MIRZ RTC chip.
Storage temperature without the ISL12020MIRZ	-55	+100	°C	Limits of DDR3 memory chip.

Table 23: PS absolute maximum ratings

Attention: PS_3.3V is directly connected to numerous on-board peripherals as supply and I/O voltage.

9.2 Recommended Operating Conditions

Operating temperature range depends also on customer design and cooling solution. Please contact us for options.

Parameter	Min	Max	Units	Reference Document
PL_VIN	3.3	4.5	V	- TI TPS720 data sheet
PS_VIN	3.3	6.0	V	- TI TPS82085 data sheet
PS_3.3V	3.1 35	3.46 5	V	- 3.3V nominal ± 5%
VBAT_IN supply voltage	2.7	5.5	V	- ISL12020MIRZ data sheet

Parameter	Min	Max	Units	Reference Document	
PL I/O bank supply voltage for HR I/O banks (VCCO)	1.14	3.465	V	-	Xilinx datasheet DS191
PL I/O bank supply voltage for HP I/O banks (VCCO)	1.14	1.89	V	-	Xilinx datasheet DS191
I/O input voltage for HR I/O banks	-0.20	VCCO_X +0.20	V	-	Xilinx datasheet DS191
I/O input voltage for HP I/O banks	-0.20	VCCO_X +0.20	V	-	Xilinx datasheet DS191
GT receiver (RXP/RXN) and transmitter (TXP/TXN)	(*)	(*)	V	(*) Check datasheet	Xilinx datasheet DS191
Voltage on Module JTAG pins	3.135	3.6	V	JTAG signals forwarded to Zynq module config bank 0	MachX02 Family Data Sheet
Recommended Operating Temperatur	-40	+85	°C

12 Disclaimer

12.1 Data Privacy

Please also note our data protection declaration at <https://www.trenz-electronic.de/en/Data-protection-Privacy>

12.2 Document Warranty

The material contained in this document is provided “as is” and is subject to being changed at any time without notice. Trenz Electronic does not warrant the accuracy and completeness of the materials in this document. Further, to the maximum extent permitted by applicable law, Trenz Electronic disclaims all warranties, either express or implied, with regard to this document and any information contained herein, including but not limited to the implied warranties of merchantability, fitness for a particular purpose or non infringement of intellectual property. Trenz Electronic shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein.

12.3 Limitation of Liability

In no event will Trenz Electronic, its suppliers, or other third parties mentioned in this document be liable for any damages whatsoever (including, without limitation, those resulting from lost profits, lost data or business interruption) arising out of the use, inability to use, or the results of use of this document, any documents linked to this document, or the materials or information contained at any or all such documents. If your use of the materials or information from this document results in the need for servicing, repair or correction of equipment or data, you assume all costs thereof.

12.4 Copyright Notice

No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Trenz Electronic.

12.5 Technology Licenses

The hardware / firmware / software described in this document are furnished under a license and may be used /modified / copied only in accordance with the terms of such license.

12.6 Environmental Protection

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

12.7 REACH, RoHS and WEEE

REACH

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of [REACH](#)¹⁶. The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no [SVHC \(Substances of Very High Concern\) on the Candidate List](#)¹⁷ are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the [European Chemicals Agency \(ECHA\)](#)¹⁸.

RoHS

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

WEEE

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health.
