

Product Overview

Qorvo’s TGA2222 is a wide band power amplifier MMIC fabricated on Qorvo’s production 0.15 μm GaN on SiC process (QGaN15). Covering 32–38 GHz, the TGA2222 provides 40 dBm (10 W) of saturated output power and 16 dB of large-signal gain while achieving > 22% power-added efficiency.

The TGA2222 employs a balanced architecture to minimize performance sensitivity to load variation. Its RF ports are DC coupled to ground for optimum ESD performance. The TGA2222 has DC blocking capacitors on both RF ports, which are matched to 50 ohms.

The TGA2222 can support a wide range of operating conditions, including CW operation, making it well-suited for both commercial and military systems.

Lead-free and RoHS compliant.

Assembly Notes

Component placement and adhesive attachment assembly notes:

- Vacuum pencils and/or vacuum collets are the preferred method of pick up.
- Air bridges must be avoided during placement.
- The force impact is critical during auto placement.

Reflow process assembly notes:

- Use AuSn (80/20) solder and limit exposure to temperatures above 300 °C for 30 seconds, maximum.
- An alloy station or conveyor furnace with reducing atmosphere should be used.
- Do not use any kind of flux.
- Coefficient of thermal expansion matching is critical for long-term reliability.
- Devices must be stored in a dry nitrogen atmosphere.

Interconnect process assembly notes:

- Thermosonic ball bonding is the preferred interconnect technique.
- Force, time, and ultrasonic are critical parameters.
- Aluminum wire should not be used.
- Devices with small pad sizes should be bonded with 0.0007-inch wire.
