TGA2224

32 – 38 GHz 5 Watt GaN Amplifier

Product Overview

Qorvo's TGA2224 is a wide band power amplifier MMIC fabricated on Qorvo's production 0.15 um GaN on SiC process (QGaN15). Covering 32 – 38 GHz, the TGA2224 provides greater than 37 dBm (5 W) of saturated output power and 16 dB of large-signal gain while achieving > 20% power-added efficiency.

The TGA2224 RF ports are DC coupled to ground for improved ESD performance. Both ports are matched to 50 ohms. The TGA2224 can support a wide range of operating conditions, including CW operation, making it well-suited for both commercial and military systems.

Lead-free and RoHS compliant.

Assembly Notes

Component placement and adhesive attachment assembly notes:

- Vacuum pencils and/or vacuum collets are the preferred method of pick up.
- Air bridges must be avoided during placement.
- The force impact is critical during auto placement.

Reflow process assembly notes:

- Use AuSn (80/20) solder and limit exposure to temperatures above 300 °C for 30 seconds, maximum.
- An alloy station or conveyor furnace with reducing atmosphere should be used.
- Do not use any kind of flux.
- Coefficient of thermal expansion matching is critical for long-term reliability.
- Devices must be stored in a dry nitrogen atmosphere.

Interconnect process assembly notes:

- Thermosonic ball bonding is the preferred interconnect technique.
- Force, time, and ultrasonic are critical parameters.
- Aluminum wire should not be used.
- Devices with small pad sizes should be bonded with 0.0007-inch wire.
