

TGA2752-SM

7.1 – 8.5 GHz Power Amplifier

Product Overview

The Qorvo TGA2752-SM is a C-Band Power Amplifier with integrated power detector. The TGA2752-SM operates from 7.1 – 8.5 GHz and is designed using Qorvo’s power GaAs pHEMT and GaN HEMT production processes.

The TGA2752-SM typically provides 40 dBm of saturated output power with small signal gain of 28 dB. Third Order Intercept is 48 dBm at 30 dBm SCL.

The TGA2752-SM is available in a low-cost, surface mount 42 lead 7 x 9 mm QFN package and is ideally suited for Point-to-Point Radio.

Lead-free and RoHS compliant.

PCB Mounting Pattern

Notes:

1. The pad pattern shown has been developed and tested for optimized assembly at Qorvo. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.
2. Ground vias are critical for the proper performance of this device. Vias should have a final plated thru diameter of .1524 mm (.006”).
3. For best thermal performance, vias under the ground paddle should be copper filled.
