

# TGP2105-SM

## 6 - 18 GHz 6-Bit Digital Phase Shifter (+Vc)

### Product Description

The Qorvo TGP2105-SM is a packaged 6-bit digital phase shifter fabricated on Qorvo's high performance 0.15  $\mu\text{m}$  GaAs pHEMT process. It operates over 6 to 18 GHz while providing 360° of phase coverage with a LSB of 5.625°. It also achieves a low RMS phase error of 4° with 8 dB of insertion loss over all states.

The TGP2105-SM uses positive switch logic, eliminating the need for a negative voltage rail. That, along with low insertion and a high degree of resolution makes the TGP2105-SM ideally suited for a variety of wideband phased array applications, including commercial and military radars, satellite-based communication systems and electronic warfare.

### Evaluation Board (EVB) Layout Assembly

Via Pattern

RF layer is 0.010" thick Rogers RO4350. Metal layers are 1-oz copper. The microstrip line taper at the connector interface is optimized for the Southwest Microwave end-launch connector 1092-01A-5.

Ground / thermal vias under the DUT are critical for the proper performance of this device. The PCB shown herein utilizes copper filled vias under the DUT.

The pad pattern shown has been developed and tested for optimized assembly at Qorvo. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company careful process development is recommended.

### Thermal and Reliability Information

Parameter	Test Conditions	Value	Units
Thermal Resistance ( $\theta_{JC}$ ) <sup>(1)</sup>	$P_{DISS} = 0.09\text{ W}$ , $T_{BASE} = 85^{\circ}\text{C}$	22	$^{\circ}\text{C/W}$

Notes:

1. Thermal resistance measured to back of package.
2. Under normal (lifetime) operating conditions, self-heating is not a significant contributor to channel temperature.

### Median Lifetime

Test Conditions: 6.0 V; Failure Criterion = 10% reduction in  $I_{DQ\_MAX}$
