

Product Overview

The TQP7M9105 is a high linearity, high gain 1 W driver amplifier in industry standard, RoHS compliant, SOT-89 surface mount package. This InGaP GaAs HBT delivers high performance across 0.05 to 1.5 GHz while achieving +47 dBm OIP3 and +30 dBm P1dB at 940 MHz while only consuming 220 mA quiescent current. All devices are 100% RF and DC tested.

The TQP7M9105 incorporates on-chip features that differentiate it from other products in the market. The amplifier has a dynamic active bias circuit that enable stable operation over bias and temperature variations and can provide a high linearity at back-off operation

The TQP7M9105 is targeted for use as a driver amplifier in wireless infrastructure where high linearity, medium power, and high efficiency are required. The device an excellent candidate for transceiver line cards and high-power amplifiers in current and next generation multi-carrier 3G / 4G base stations.

Device Characterization Data

Note: The gain for the unmatched device in 50 Ω system is shown as the trace in black color, [gain (S(21))]. For a tuned circuit for a particular frequency, it is expected that actual gain will be higher, up to the maximum stable gain. The maximum stable gain is shown as the blue trace [Gmax]. The impedance plots are shown from 0.01– 4 GHz.
