Low Quiescent Current Low-Dropout Linear Voltage Regulator

DESCRIPTION

TS3480 series is an integrated linear voltage regulator. It can be provided the operation from an input as high as 30V and a guaranteed maximum dropout of 1.2V at the full 100mA load. The 1.2V quasi low dropout of TS3480 series is able to makes them a nice fit in many applications where the 2 to 2.5V dropout of TS78LXX series devices precludes their use.

The TS3480 series features 5V & 3.3V output voltage options. The SOT packaging and quasi low dropout features of the TS3480 series converge in this device to provide a very nice, very tiny 5V & 3.3V, 100mA bias supply that regulates directly off the system power supply.

FEATURES

- 30V maximum input for operation
- 2V guaranteed maximum dropout over full load and temperature ranges
- 100mA guaranteed minimum load current
- ±5% guaranteed output voltage tolerance over full load and temperature ranges
- −40 to +125˚C junction temperature range for operation
- Compliant to RoHS Directive 2011/65/EU and in accordance to WEEE 2002/96/EC.
- Halogen-free according to IEC 61249-2-21

APPLICATION

- Tiny alternative to TS78LXX series and similar devices
- Tiny 5V±5% to 3.3V, 100mA converter
- Post regulator for switching DC/DC converter
- Bias supply for analog circuits

SOT-23
Pin Definition:
1. Output
2. Input
3. Ground

Notes: MSL 1 (Moisture Sensitivity Level) per J-STD-020

TYPICAL APPLICATION CIRCUIT

ABSOLUTE MAXIMUM RATINGS (T_A = 25°C unless otherwise specified) [Note 1]

PARAMETER	SYMBOL	LIMIT	UNIT
Input Voltage	V_{IN}	35	V
Operating Input Voltage	V_{OPER}	30	V
Output Current Range	I_{OUT}	100	mA
Power Dissipation [Note 2]	P_D	350	mW
Junction Temperature	T_J	+150	°C
Operating Temperature Range	T_{OPER}	-40 ~ +125	°C
Storage Temperature Range	T_{STG}	-65 ~ +150	°C
Lead Soldering Time (260°C) [Note 3]	T_{SOLDER}	4	Sec
ESD [note 4]	HBM	2	kV

ELECTRICAL SPECIFICATIONS (T_A = 25°C unless otherwise specified)

PARAMETER	SYMBOL	CONDITION	MIN	TYP	MAX	UNIT
3.3V Output						
Output Voltage	V_{OUT}	V_{IN} = 4.8V, Io= 1mA ~ 100mA	3.17	3.3	3.43	V
Line Regulation	ΔV_{DDLine}	4.8V ≤ V_{IN} ≤ 30V, Io= 1mA	--	10	25	mV
Load Regulation	ΔV_{DDLoad}	V_{IN} = 4.8V, Io= 1mA~100mA	--	20	40	mV
Dropout Voltage	V_{DROP_OUT}	Io=10mA	--	0.75	0.9	V
		Io=100mA	--	0.95	1.1	V
Quiescent Current		V_{IN} = 4.8V ≤ V_{IN} ≤ 30V, Io=0V	--	3	5	mA
Output Current	I_{OUT}	V_{IN} - V_{OUT} = 20V	100	--	--	mA
Ripple Rejection		F= 10Hz ~ 100kHz, Io= 0mA, C_{OUT} = 0.1µF, V_{IN} = 10V	--	100	--	μV_{RMS}
5.0V Output						
Output Voltage	V_{OUT}	V_{IN} = 6.5V, Io= 1mA ~ 100mA	4.80	5.0	5.20	V
Line Regulation	ΔV_{DDLine}	6.5V ≤ V_{IN} ≤ 30V, Io= 1mA	--	10	25	mV
Load Regulation	ΔV_{DDLoad}	V_{IN} = 6.5V, Io= 10mA~100mA	--	20	40	mV
Dropout Voltage	V_{DROP_OUT}	Io=10mA	--	0.75	0.9	V
		Io=100mA	--	0.95	1.1	V
Quiescent Current		V_{IN} = 6.5V ≤ V_{IN} ≤ 30V, Io=0V	--	3	5	mA
Output Current	I_{OUT}	V_{IN} - V_{OUT} = 20V	100	--	--	mA
Ripple Rejection		F= 10Hz ~ 100kHz, Io= 0mA, C_{OUT} = 0.1µF, V_{IN} = 10V	--	150	--	µVrms

Note:

1. Absolute Maximum Ratings are limits beyond which damage to the device may occur. Operating ratings are conditions under which operation of the device is guaranteed. Operating ratings do not imply guaranteed performance limits. For guaranteed performance limits and associated test conditions, see the Electrical Characteristics.

2. The Absolute Maximum power dissipation depends on the ambient temperature and can be calculated using $P = (T_J - T_A) / R_{\theta JA}$ where T_J is the junction temperature, Ta is the ambient temperature, and $R_{\theta JA}$ is the junction-to-ambient thermal resistance. The 350mW rating results from substituting the absolute maximum junction temperature, 150°C for T_J, 50°C for Ta, and 300°C/W for $R_{\theta JA}$. More power can be safely dissipated at lower ambient temperatures, and less power can be safely dissipated at higher ambient temperatures. The absolute maximum power dissipation can be increased by 3.5mW for each Celsius below 50°C ambient. It must be derated by 3.5mW for each Celsius above 50°C ambient. A $R_{\theta JA}$ of 300°C/W represents the worst-case condition of no heat sinking of the 3-lead plastic SOT-23 package. Heat sinking enables the safe dissipation of more power. The TS3480 actively limits its junction temperature to about 150°C.

3. Times shown are dwell times. Temperatures shown are dwell temperatures.

4. For testing purposes, ESD was applied using the Human-Body Model, a 100pF capacitor discharged through a 1.5kΩ resistor.

5. A typical is the center of characterization data taken with $T_A = T_J = 25°C$. Typical are not guaranteed.

6. All limits are guaranteed. All electrical characteristics having room-temperature limits are tested during production with $T_A = T_J = 25°C$. All hot and cold limits are guaranteed by correlating the electrical characteristics to process and temperature variations and applying statistical process control.

7. All voltages except dropout are with respect to the voltage at the GND pin.

ORDERING INFORMATION

OUTPUT VOLTAGE	ORDERING CODE	PACKAGE	PACKING
3.3V	TS3480CX33 RFG	SOT-23	3,000pcs / 7" Reel
5V	TS3480CX50 RFG	SOT-23	3,000pcs / 7" Reel
