

Features

- Ultra low current consumption (6 μ A/comp. at $V_{CC} = 2.7$ V)
- Rail-to-rail CMOS inputs
- Push-pull outputs
- Supply operation from 2.7 to 10 V
- Low propagation delay
- ESD protection (2 kV)
- Latch-up immunity (class A)
- Available in SOT23-5 micropackage, SO-8, SO-14, TSSOP8, and TSSOP14 package

Applications

- Battery powered systems such as alarms
- Portable communication systems
- Smoke/gas/fire detectors
- Portable computers

Description

The TS86x device (single, dual and quad) is a rail-to-rail comparator characterized for 2.7 to 10 V operation over -40 °C to $+85$ °C temperature ranges. It exhibits an excellent speed-to-power ratio, featuring a current consumption of 6 μ A per comparator and a response time of 500 ns at 2.7 V for a 100 mV overdrive.

Due to its ultra low power consumption and its availability in a tiny package, the TS86x comparator family is perfectly suited to battery-powered systems. The output stage is designed with a push-pull structure allowing a direct connection to the microcontroller without additional pull-up resistors.

1 Absolute maximum ratings and operating conditions

Table 1. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V _{CC}	Supply voltage ⁽¹⁾	12	V
V _{ID}	Differential input voltage ⁽²⁾	±12	V
V _{IN}	Input voltage range ⁽³⁾	-0.3 to 12.3	V
R _{THJA}	Thermal resistance junction-to-ambient ⁽⁴⁾		
	SOT23-5	250	°C/W
	SO-8	125	
	SO-14	105	
	TSSOP8	120	
TSSOP14	100		
R _{THJC}	Thermal resistance junction-to-case ⁽⁴⁾		
	SOT23-5	81	°C/W
	SO-8	40	
	SO-14	31	
	TSSOP8	37	
TSSOP14	32		
T _{STG}	Storage temperature range	-65 to +150	°C
T _J	Maximum junction temperature	150	°C
T _{LEAD}	Lead temperature (soldering, 10 sec.)	260	°C
ESD	Human body model (HBM) ⁽⁵⁾	2	kV
	Machine model (MM) ⁽⁶⁾	200	V
	Latch-up immunity	Class A	

1. All voltages values, except differential voltage are with respect to network terminal.
2. Differential voltages are non-inverting input terminal with respect to the inverting input terminal.
3. The magnitude of input and output voltages must never exceed V_{CC} +0.3 V.
4. Short-circuits can cause excessive heating. These values are typical.
5. Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 kΩ resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.
6. Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of connected pin combinations while the other pins are floating.

Table 2. Operating conditions

Symbol	Parameter	Value	Unit
V _{CC}	Supply voltage	2.7 to 10	V
V _{ICM}	Common mode input voltage range	V _{CC} ⁻ - 0.3 to V _{CC} ⁺ + 0.3	V
T _{Oper}	Operating free air temperature range	-40 to + 85	°C

2 Electrical characteristics

**Table 3. Electrical characteristics at $V_{CC} = 2.7\text{ V}$, $T_{amb} = 25\text{ °C}$

5 Revision history

Table 12. Document revision history

Date	Revision	Changes
01-Feb-2002	1	Initial release.
28-Apr-2009	2	Updated document format. Removed power dissipation from Table 1: Absolute maximum ratings . Added Rthja and Rthjc values and ESD notes in Table 1 . Updated curves in Figure 1 to Figure 14 . Changed Figure 15 , Figure 16 , Figure 17 and Figure 18 . Added Figure 19 , Figure 20 , Figure 21 , Figure 22 and Figure 23 . Removed DIP package information in Chapter 3 and Chapter 4 . Added ordering information in Table 11: Order codes .
06-Nov-2012	3	Updated titles of Figure 9 to Figure 12 (added conditions). Removed TS861IYLT, TS861AIYLT, TS862IYDT, TS862AIYDT, TS864IYDT, and TS864AIYDT order codes from Table 11 . Minor corrections throughout document.
