User guide

### 1 TWR-17510EVB

**TWR-17510EVB Tower System Platform** 

#### 2 Important notice

NXP provides the enclosed product(s) under the following conditions:

This evaluation kit is intended for use of ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY. It is provided as a sample IC pre-soldered to a printed circuit board to make it easier to access inputs, outputs, and supply terminals. This evaluation board may be used with any development system or other source of I/O signals by simply connecting it to the host MCU or computer board via off-theshelf cables. This evaluation board is not a Reference Design and is not intended to represent a final design recommendation for any particular application. Final device in an application will be heavily dependent on proper printed circuit board layout and heat sinking design as well as attention to supply filtering, transient suppression, and I/O signal quality.

The goods provided may not be complete in terms of required design, marketing, and or manufacturing related protective considerations, including product safety measures typically found in the end product incorporating the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. In order to minimize risks associated with the customers applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards. For any safety concerns, contact NXP sales and technical support services.

Should this evaluation kit not meet the specifications indicated in the kit, it may be returned within 30 days from the date of delivery and will be replaced by a new kit.

NXP reserves the right to make changes without further notice to any products herein. NXP makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does NXP assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typical", must be validated for each customer application by customer's technical experts.

NXP does not convey any license under its patent rights nor the rights of others. NXP products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the NXP product could create a situation where personal injury or death may occur.

Should the Buyer purchase or use NXP products for any such unintended or unauthorized application, the Buyer shall indemnify and hold NXP and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges NXP was negligent regarding the design or manufacture of the part. NXP and the NXP logo are trademarks of NXP B.V. All other product or service names are the property of their respective owners. © 2016 NXP B.V.

### 3 Getting started

#### 3.1 Kit contents/packing list

The TWR-17510EVB contents includes:

- Assembled and tested evaluation board/module in anti-static bag
- Quick start guide

#### 3.2 Jump start

NXP's analog product development boards provide an easy-to-use platform for evaluating NXP products. The boards support a range of analog, mixed-signal and power solutions. They incorporate monolithic ICs and system-in-package devices that use proven high-volume SMARTMOS technology. NXP products offer longer battery life, a smaller form factor, reduced component counts, lower cost and improved performance in powering state-of-the-art systems.

- 1. Go to <u>www.nxp.com/TWR-17510EVB</u>.
- 2. Review the tool summary page.
- 3. Locate and click:

### Jump Start Your Design

4. Download the documents, software and other information.

Once the files are downloaded, review the user guide in the bundle. The user guide includes setup instructions, BOM and schematics. Jump start bundles are available on each tool summary page with the most relevant and current information. The information includes everything needed for design.

#### 3.3 Required equipment and software

This kit requires the following items:

- DC Power supply (2.0 V to 15.0 V, 0.1 A to 1.2 A, depending on stepper motor requirements)
- Typical loads (brushed DC motors, high side MOSFET or power resistors)
- Wire cables for power supply and load connection
- Other Tower/Freedom modules (MCU, ELEV etc): <u>http://www.NXP.com/tower</u> or <u>http://</u> www.NXP.com/freedom

### 4 Understanding the Tower system

NXP's Tower System peripheral module is designed to be combined and used with other Tower System modules. The Tower System is a modular development platform for 8-, 16- and 32-bit MCUs and MPUs that enables advanced development through rapid prototyping. Featuring more than fifty development boards or modules, the Tower System provides designers with building blocks for entry-level to advanced MCU development.

Figure 1. Tower System

#### 4.1 Block diagram

Figure 2 shows the hardware block diagram for the TWR-17510EVB:

#### **NXP Semiconductors**

## KTTWR17510EVBUG

#### TWR-17510EVB Tower System Platform

#### 4.2 Device features

The board features the following NXP product:

#### Table 1. Device features

Device	Description	Features
MPC17510AEJ	The MPC17510AEJ is an H- Bridge motor driver IC intended for operating brushed DC motors.	<ul> <li>Wide voltage range of operation from 2.0 V to 15 V</li> <li>Output current of 1.2 A (DC) continuous, 3.8 A peak</li> <li>450 mΩ R<sub>DS(on)</sub> H-Bridge MOSFET outputs</li> <li>5.0 V TTL/CMOS compatible inputs</li> <li>PWM frequencies up to 200 kHz</li> <li>Undervoltage shutdown</li> <li>Cross conduction (shoot through) suppression</li> </ul>

**TWR-17510EVB Tower System Platform** 

### 5 Getting to know the hardware

#### 5.1 Board overview

The TWR-17510EVB module is an easy-to-use development board that allows the user to exercise all the functions of the MPC17510AEJ H-bridge motor driver IC. The TWR-17510EVB can operate as a standalone tool and can also be combined and used as part of the modular Tower and Freedom System development platform.

#### 5.2 Board features

The board features the following:

- · Compatibility with NXP's Tower and Freedom system development platform
- · LEDs to indicate the supply status
- Transient voltage suppressor to handle system level transients
- · Test points to allow probing of signals

#### 5.3 Board description

#### TWR-17510EVB Tower System Platform

#### Table 2. Board description

Number	Name	Description
1	Arduino <sup>™</sup> connectors	Supports connection to additional MCU Freedom boards
2	TWR-ELEV-SEC	Tower platform secondary elevator module
3	Motor and load connectors	Connectors for external motors and loads
4	MPC17510AEJ	H-Bridge motor driver IC
5	Reserved connector	Supports MCU ADC/PWM function expansion
6	TWR-ELEV-PRI	Tower platform primary elevator module (denoted by white stripe)
7	Power supply connectors	Connectors for motor and digital power supplies

### 5.4 LED display

The board contains the following LEDs:

#### Figure 4. LED locations

LED ID	Description
D2	GREEN LED—indicates when the motor power supply is connected to the MPC17510AEJ VM pin
D4	RED LED—indicates when the digital power supply is connected to the MPC17510AEJ VDD pin

KTTWR17510EVBUG

TWR-17510EVB Tower System Platform

### 5.5 Jumper definitions

Figure 5 shows the location of jumpers on the tower board.

Table 4 describes the function and settings for each jumper.

Jumper/Switch	Description	Setting	Connection/Result
J13 <sup>[1]</sup>	IN1 short to VDD/	1–2	IN1 connected to VDD 5.0 V
J13 · ·	GND selection	2–3	IN1 connected to Ground
J14 <sup>[1]</sup>	IN2 short to VDD/	1–2	IN2 connected to VDD 5.0 V
514	GND selection	2–3	IN2 connected to Ground
J15 <sup>[1]</sup>	EN short to VDD/	1–2	EN connected to VDD 5.0 V
515	GND selection	2–3	EN connected to Ground
J16 <sup>[1]</sup>	GIN short to VDD/	1–2	GIN connected to VDD 5.0 V
J 10 <sup></sup>	GND selection	2–3	GIN connected to Ground
		1–2	VM is connected to VDD
J36 <sup>[1]</sup>	Power supply bridge	Open	VM is disconnected from VDD

#### Table 4. Jumper definitions

[1] DNP (Do not populate)

TWR-17510EVB Tower System Platform

### 5.6 Test point definitions

The following test points provide access to various signals to and from the board.

#### Figure 6. Test point locations

able 5. Test point definitions							
Test point name	Signal name	Description					
TP1	IN1	In-circuit test IN1 probing / debug hook					
TP2	IN2	In-circuit test IN2 probing / debug hook					
TP3	EN	In-circuit test EN probing / debug hook					
TP4	GIN	In-circuit test GIN probing / debug hook					
TP5	Ground	In-circuit test GND probing / debug ground hook					
TP6	Ground	In-circuit test GND probing / debug ground hook					

KTTWR17510EVBUG

#### **NXP Semiconductors**

### KTTWR17510EVBUG

#### TWR-17510EVB Tower System Platform

Test point name	Signal name	Description
TP7	Ground	In-circuit test GND probing / debug ground hook
TP8	Ground	In-circuit test GND probing / debug ground hook
TP9	Ground	In-circuit test GND probing / debug ground hook
TP10	Ground	In-circuit test GND probing / debug ground hook
TP11	VM	In-circuit test VM probing / debug hook
TP12	VDD	In-circuit test VDD probing / debug hook
TP14	Ground	In-circuit test GND probing / debug ground hook

#### 5.7 Connectors

The board has the following connectors.

#### Figure 7. Connector locations

#### Table 6. Connectors

Connector name	Description
J1, J2	Arduino <sup>™</sup> connectors for attaching additional Freedom boards
J6	Motor connector for H-bridge Channel 1 on the MPC17510AEJ
J8	Motor power supply connector for the MPC17510AEJ VM pin
J9, J10	Arduino <sup>™</sup> connectors for attaching additional Freedom boards
J11A	Connects to the TWR-ELEV-PRI Tower elevator primary module. White stripe indicates that the male connector connects with the white female connectors on the Tower elevator primary module.

#### TWR-17510EVB Tower System Platform

Connector name	Description
J11B	Connects to TWR-ELEV-SEC Tower elevator secondary module. The male connector connects with the female connectors on the Tower elevator secondary module.
J12	Reserved connector for MCU ADC/PWM interface
J38	Digital power supply connector for MC17510AEJ VDD
J39	External high-side MOS load connector

#### 5.7.1 Tower elevator connections

TWR-17510EVB features two expansion card-edge connectors that interface to elevator boards in a Tower System: the Primary and Secondary Elevator connectors. <u>Table 7</u> provides the pinouts for the Primary Elevator Connector. There are no connections for the Secondary Elevator Connector.

Table 7. Primary elevator connector pinouts

### 9 Revision history

Revision	Date	Description of changes	
1.0	8/2016	Initial release	

#### TWR-17510EVB Tower System Platform

### **10 Legal information**

#### **10.1 Definitions**

**Draft** — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

#### **10.2 Disclaimers**

Information in this document is provided solely to enable system and software implementers to use NXP products. There are no express or implied copyright licenses granted hereunder to design or fabricate any integrated circuits based on the information in this document. NXP reserves the right to make changes without further notice to any products herein.

NXP makes no warranty, representation, or guarantee regarding the suitability of its products for any particular purpose, nor does NXP assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters that may be provided in NXP data sheets and/ or specifications can and do vary in different applications, and actual performance may vary over time. All operating parameters, including "typicals," must be validated for each customer application by customer's technical experts. NXP does not convey any license under its patent rights nor the rights of others. NXP sells products pursuant to standard terms and conditions of sale, which can be found at the following address: nxp.com/salestermsandconditions.

#### **10.3 Trademarks**
