

Computer On Module

- Processor NXP i.MX28, 454 MHz
- RAM 128MB DDR2-400 SDRAM
- ROM 128MB SLC NAND Flash
- RTC DS1339 Real Time Clock
- Power supply Single 3.1V to 5.5V
- Size 26mm SO-DIMM
- Temp.-Range -40°C..85°C

Key Features

- Two 10/100Mbps Ethernet ports with IEEE1588 support
- Two High-Speed USB 2.0 ports
- True colour LCD controller
- Two CAN interfaces
- 4/5 wire Touchscreen interface
- Several peripheral interfaces:
 - UART, SD-CARD, I2C, PWM, Serial Audio, SPI
- Power management optimized for long battery life
- 3.3V I/O

OS Support

- Windows Embedded CE
- Linux

**454 MHz
ARM9**

Board highlights:

- Lowest cost 454MHz ARM9
- Industrial temperature range
- Standard TX-DIMM pinout
- as small as possible - only 26mm

The TX28 is a member of the TXCOM module series, specially designed for NXP i.MX multimedia processors. TXCOM modules are complete computers, implemented on a board smaller than a credit card, and ready to be designed into your embedded system. TXCOM modules includes a NXP i.MX processor, SDRAM and Flash memory. The integrated LCD-controller enables direct connection of an LCD screen. The TX28 is specifically targeted at embedded applications where size, high cpu-performance and cost are critical factors.

Computer on module

- NXP i.MX287, 454 MHz
- 128 MByte DDR2-400 SDRAM (16bit)
- 128 MByte NAND Flash memory
- DIMM200-module (67,6mm x 26 mm x 3,6mm)
- Operating temperature range -40..85°C

i.MX28 for Industrial Applications

The i.MX28 family of multimedia applications processors is the latest extension of NXP Semiconductors' ARM9 product portfolio. The i.MX28 family integrates display, power management, and connectivity features unmatched in ARM9-based devices, reducing system cost and complexity for cost sensitive applications. And easy-to-use tools and software help you design differentiated industrial and consumer products in less time.

With optimized performance and power consumption, the i.MX28 is an ideal fit for fanless systems or for portable equipment that need to be battery operated. Numerous connectivity options including dual 10/100 Ethernet (IEEE® 1588 capable) with L2 switch address specific needs for industrial applications. Additionally, the LCD controller with touch screen capability makes it possible to design creative and intuitive user interfaces that are required by many applications.

The i.MX28 family of multimedia applications processors integrates display, power management, CAN, USB, and Ethernet connectivity. The combination of advanced connectivity peripherals with a 454Mhz ARM9 processor core creates a platform for gateway products that bridge multiple networks. With attention to overall system cost, i.MX28 integrates physical USB interfaces (PHY), 10/100 Ethernet , power management, and a resistive touch screen display controller.

Standard TXCOM pinout:

- 4-wire UARTs (x3)
- LCD
- I2C / PWM
- Serial Audio Interfaces (x2)
- 4-wire SD-Card/SDIO

High-Speed communication interfaces incl. onboard Ethernet PHY / on-chip USB PHY allows direct use of connectors/magnetics on the baseboard without the need for additional logic:

- 10/100 Mbps Ethernet
- 480 Mbps USB OTG
- 480 Mbps USB Host

Additional interfaces like CAN, 4/5-wire resistive touch-screen, 2 UARTs and external memory interface are available on TX28 specific pins. Some interfaces are multiplexed with other functions.

Power Supply

The TX28 accepts an input voltage from various sources:

- 1-cell Li-Ion/Polymer (3.1V to 4.2V)
- 5.0V USB supply or AC wall adapter
- 3.3V

POWER SUPPLY & RESET						
1-4	power	VIN				Module power supply input (3.0V-5.5V)
5-7, 9-12	power	VOOUT				3.3V power supply output (up to 0.2A)
8	3V3	BOOTMODE			47K-PU	Boot mode select H: Boot from NAND / L: Boot from UART/USB
13	power	VBACKUP	-			DS1339 RTC backup power supply. Supply voltage must be held between 1.3V and 3.7V for proper RTC operation. This pin can be connected to a primary cell such as a lithium button cell. Additionally, this pin can be connected to a rechargeable cell or a super cap when used with the trickle charge feature.
14	special		PSWITCH		100K-PU 47K-PD 10K series	Used for chip power on or recovery. PSWITCH is at MID LEVEL & STARTUP by default. A 10kΩ resistor in series is used. Connect to GND for LOW LEVEL, connect to 3V3 for HIGH LEVEL, leave unconnected (MID LEVEL) if not used. => i.MX28 Reference manual chap 11.4 "PSWITCH Pin Functions"
15	3V3	FEC_RESET_B	ENET0_RX_CLK	ENET0_RX_ER ENET0_1588_EVENT2_IN	GPIO4_13 10K-PU	Ethernet PHY reset – active low output signal. This pin is hard wired to the onboard Ethernet PHY and provides a fixed function.
16	VIN	#POR			10K-PU	Power On Reset - active low input signal. Typically a push button reset. Leave unconnected if not used. The i.MX28 is a PMU and an SoC, power-on reset is generated internally. If low the power supply connected to the i.MX28 is turned off.
17	3V3	#RESETIN	RESETN			This pin resets the chip if it is low. This pin is pulled up to VDDIO33 with an internal resistor. No external pull up resistors are needed
