

## 80 V - 1.5 A quad Darlington switches

### Features

- Output current to 1.5 A for each Darlington
- Minimum breakdown 80 V
- Sustaining voltage at least 35 V
- Integral suppression diodes (ULN2065B, ULN2067B and ULN2069B)
- Isolated Darlington pinout (ULN2075B)
- Versions compatible with all popular logic families

### Description

Designed to interface logic to a wide variety of high current, high voltage loads, these devices each contain four NPN Darlington switches delivering up to 1.5 A with a specified minimum breakdown of 50 V and a sustaining voltage of 35 V measured at 100 mA. The ULN2067B and ULN2069B contain integral suppression diodes for inductive loads have common emitters. The ULN2075B feature isolated Darlington pinouts and is intended for applications such as emitter

follower configurations.

Inputs of the ULN2065B, ULN2069B and ULN2075B are compatible with popular 5 V logic families and the ULN2067B is compatible with 6-15 V CMOS and PMOS. Type ULN2069B includes a pre-driver stage to reduce loading on the control logic.

## 6 Mounting instructions

The  $R_{thJA}$  can be reduced by soldering the GND pins to a suitable copper area of the printed circuit board (Figure 14) or to an external heatsink (Figure 15).

The diagram of Figure 16 shows the maximum dissipated power  $P_{TOT}$  and the  $R_{thJA}$  as a function of the side "α" of two equal square copper areas having a thickness of 35 μ (1.4 mils).

During soldering the pins temperature must not exceed 260 °C and the soldering time must not be longer than 12 seconds.

The external heatsink or printed circuit copper area must be connected to electrical ground.
