

Shrouded Power Relay F4 A

- Pin assignment similar to ISO 7588 part 1
- Plug-in terminals
- Customized versions on request
 - Integrated components (e.g. resistor, diode)
 - Customized marking/color
 - Special cover with bracket

Typical applications

Cross carline up to 40A for example: ABS control, blower fans, cooling fan, energy management, engine control, fuel pump, heated front screen, lamps: front, rear, fog light, main switch/supply relay, wiper control.

- The values apply to a resistive or inductive load with suitable spark suppression and at maximum 14VDC for 12VDC or 28VDC for 24VDC load voltages. For a load current duration of maximum 3s for a make/break ratio of 1:10.
- Current and time are compatible with circuit protection by a typical automotive fuse.
 Relay will make, carry and break the specified current.
- See chapter Diagnostics of Relays in our Application Notes or consult the internet at http://relays.te.com/appnotes/
- 4) For unsuppressed relay coil. A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding.

Coil Data	
Rated coil voltage	12VDC

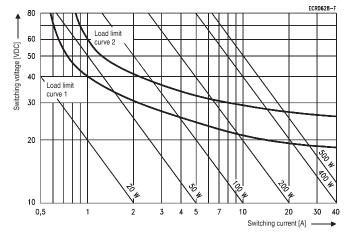

Coil versions, DC coil

Coil	Rated	Operate	Release	Coil	Rated coil
code	voltage	voltage	voltage	resistance ⁵⁾	power ⁵⁾
	VDC	VDC	VDC	Ω±10%	W
001	12	7.2	1.6	114	1.3

5) Without components in parallel.

All figures are given for coil without pre-energization, at ambient temperature +23°C.

Max. DC load breaking capacity

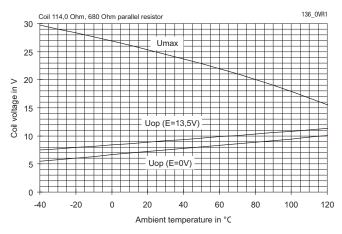

Load limit curve 1: arc extinguishes during transit time (changeover contact).

Load limit curve 2: safe shutdown, no stationary arc (make contact).

Load limit curves measured with low inductive resistors verified for 1000 switching events.

Coil operating range

Does not take into account the temperature rise due to the contact current $\mathsf{E} = \mathsf{pre}\text{-}\mathsf{energization}.$
