

Power Relay B

- Pin assignment similar to ISO 7588 part 1
- Plug-in terminals
- Customized versions on request
 - 24VDC versions with contact gap >0.8mm
 - Integrated components (e.g. resistor, diode)
 - Customized marking/color
 - Special covers (e.g. notches, release features, brackets)
 - Various contact arrangements and materials

Typical applications

Cross carline up to 35A for example: rear window defogger, battery disconnection, power distribution (clamp 15)

- 1) The values apply to a resistive or inductive load with suitable spark suppression and at maximum 14VDC for 12VDC or 28VDC for 24VDC load voltages. For a load current duration of maximum 3s for a make/break ratio of 1:10.
- 2) Current and time are compatible with circuit protection by a typical automotive fuse. Relay will make, carry and break the specified current.
- 3) See chapter Diagnostics of Relays in our Application Notes or consult the internet at <http://relays.te.com/appnotes/>
- 4) For unsuppressed relay coil. Any parallel device to the coil will increase the release time.
- 5) Electrical endurance data is not valid for diode versions. Any diode or pn-junction parallel to the coil (internal or external) will significantly decrease the electrical lifetime, especially when used for inductive loads.
