

# VSM-2 Series Micro Sensor

## Datasheet

Miniature self-contained sensor in a stainless steel housing

- Available with 4 mm diameter smooth barrel or 5 mm threaded barrel for mounting in the smallest spaces
- Diffuse and opposed mode sensing options to meet a wide variety of application requirements
- IO-Link communication for remote configuration and monitoring, simple device replacement, and advanced diagnostics
- Visible red beam for easy alignment
- Dual color LED indicator for clear visualization of sensor status
- Focused beam allows for reliable presence detection even when the sensor is fully embedded within the machine

**WARNING:**

- **Do not use this device for personnel protection**
- Using this device for personnel protection could result in serious injury or death.
- This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A device failure or malfunction can cause either an energized (on) or de-energized (off) output condition.

## Remote Configuration Instructions—100 mm Diffuse Mode Models Only

### One-Point TEACH

A one-point TEACH sets the threshold for ON/OFF using a single target.

A target that returns the same or more light to the sensor turns the output ON. A target that returns less light than the configured target turns the output OFF.

1. Position the target.
2. Hold the remote input wire (white) high for 1 to 3 seconds.
3. Release the remote input wire before 3 seconds.

The amber LED is on for 3 seconds, indicating a valid configuration. After the configuration, the green/output LED is on.

When presenting a darker target than the one that was configured, the amber LED turns on as the threshold is approached. With a darker target, the green/output LED is off.

### Two-Point TEACH

A two-point TEACH sets the threshold between two different targets.

A target that returns the same or more light to the sensor turns the output ON. A target that returns less light than the configured target turns the output OFF.

1. Position the target at the desired ON condition.

2. Hold the remote input wire (white) high for 6 to 15 seconds to teach the ON condition.  
The amber LED flashes for 3 seconds while the remote input wire is held high, turns off for 3 seconds, and then begins flashing again at 6 seconds.
3. Release remote input wire before 15 seconds.
4. Position the target at the desired OFF condition.
5. Hold the remote input wire high for 1 second.  
The amber LED is on for 3 seconds, indicating a valid configuration. The green/output LED and the sensor output are OFF.

A moving target causes the amber LED to turn on as the target reaches the threshold. After the target is at or above the threshold, the green/output LED and the sensor output are ON.

## Specifications

### Supply Voltage and Current

10 to 30 V dc (10% maximum ripple)  
Less than 12 mA consumption without load

### Supply Protection Circuitry

Protected against reverse polarity and transient voltages

### Output Configuration

Single-output: 1 NPN or 1 PNP/IO-Link; light operate (LO) or dark operate (DO), depending on model

### Output Rating

Current: Less than 100 mA  
PNP On Voltage: Supply voltage – 2 V  
PNP Off Voltage: Approximately 0 V  
NPN On Voltage: Supply voltage  
NPN Off Voltage: < 2.0 V

### Output Protection Circuitry

Protected against false power-up and continuous overload or short circuit of outputs  
Overload trip point  $\geq 100$  mA

### Light Source

Opposed, Diffuse: 630 nm red LED

### Required Overcurrent Protection

**WARNING:** Electrical connections must be made by qualified personnel in accordance with local and national electrical codes and regulations.

Overcurrent protection is required to be provided by end product application per the supplied table.  
Overcurrent protection may be provided with external fusing or via Current Limiting, Class 2 Power Supply.  
Supply wiring leads < 24 AWG shall not be spliced.  
For additional product support, go to [www.bannerengineering.com](http://www.bannerengineering.com).

Supply Wiring (AWG)	Required Overcurrent Protection (Amps)
20	5.0
22	3.0
24	2.0
26	1.0
28	0.8
30	0.5

### Response Time

Normal Mode: Less than 500  $\mu$ s (default)  
Fine Mode: Less than 1 ms (selectable via IO-Link)  
Fast Mode: Less than 200  $\mu$ s (selectable via IO-Link)

### Switching Frequency

Normal Mode: Less than 1 kHz (default)  
Fine Mode: Less than 500 Hz (selectable via IO-Link)  
Fast Mode: Less than 2.5 kHz (selectable via IO-Link)

### Delay at Power-Up

20 milliseconds

### Repeatability

1 millisecond

### Indicators

Green/output LED: Output is conducting  
Amber LED: Marginal signal or near threshold of the sensor (ON to OFF or OFF to ON)

### Light Spot Size

Diffuse: 5 mm dia (at 10 mm), 8 mm (at 20 mm), and 20 mm (at 50 mm)  
Opposed: 50 mm dia (at 200 mm)

### Construction

V2A stainless steel with PUR cable; PBT/PMMA optics

### Environmental Rating

IEC IP67

### Connection

2 m (6.5 ft) unterminated 3-wire PUR-jacketed cable; 150 mm (6 in) PUR cable with a 3-pin M8/Pico-style quick disconnect; Integral 3-pin M8/Pico-style quick disconnect; 2 m (6.5 ft) unterminated 4-wire PUR-jacketed cable; or 150 mm (6 in) PUR cable with a 4-pin M8/Pico-style quick disconnect, depending on the model

### Operating Conditions

-25 °C to +65 °C (-13 °F to +149 °F)

### Vibration and Mechanical Shock

IEC 60947-5-2
