② 国际 Electronic Circuit Protector ESX10-T.-DC 24 V

Description

Electronic circuit protector type ESX10-T is designed to ensure selective disconnection of DC 24 V load systems.

DC 24 V power supplies, which are widely used in industry today, will shut down the output in the event of an overload with the result that one faulty load in the system can lead to complete disconnection of all loads. As well as an unidentified failure this also means stoppage of the whole system.

Through **selective** disconnection the ESX10-T responds much faster to overload or short circuit conditions than the switch-mode power supply. This is achieved by active current limitation. The ESX10-T limits the highest possible current to 1.3 to 1.8 times the selected rated current of the circuit protector. Thus it is possible to switch on **capacitive loads of up to 75,000 \mu F**, but they are disconnected only in the event of an overload or short circuit.

For optimal alignment with the characteristics of the application the current rating of the ESX10-T can be selected in fixed values from 0.5 A...12 A or in adjustable ratings e.g. [2 A/4 A/6 A]. Failure and status indication are provided by a multicolour LED and an integral short-circuit-proof status output or a potential-free signal contact. Remote operation is possible by means of a remote reset signal or a remote ON/OFF control signal. The manual ON/OFF button allows separate actuation of individual load circuits.

The ESX10-T, with a width of only 12.5 mm, can be snapped onto symmetrical rails ensuring ease of installation and saving space in control cabinets.

Upon detection of overload or short circuit in the load circuit, the MOSFET of the load output will be blocked to interrupt the current flow. The load circuit can be re-activated via the remote electronic reset input, control input or manually by means of the ON/OFF button.

US patent number: US 6,490,141 B2 **US** patent number: US 8,237,311 B2

Features

- Selective load protection, electronic trip characteristics.
- Suitable for all kinds of loads (DC 24 V motors upon request)
- Active current limitation for safe connection of capacitive loads up to 75,000 µF and on overload/short circuit.
- ESX10-TA/-TB:

Current ratings 0.5 A...12 A

ESX10-TD:

adjustable ratings [0.5 A/1 A/2 A], [2 A/3 A/4 A], [2 A/4 A/6 A] and [6 A/8 A/10 A]

- Reliable overload disconnection with 1.1 x I_N plus, even with long load lines or small cable cross sections (see table 3).
- Manual ON/OFF button (S1).
- Control input IN+ for remote ON/OFF signal (option).
- Electronic reset input RE (option).
- Clear status and failure indication through LED, status output SF or Si contact F.
- Integral fail-safe element adjusted to current rating.
- Width per unit only 12.5 mm.
- Rail mounting
- Ease of wiring through busbar LINE+ and 0 V as well as signal bars and bridges.
- Additional versions with ATEX approval available.
 Marking: Will 3G Ex nA IIB T4 Gc X
 ESX10-TA-...-E and ESX10-TB-...E

Please observe separate operating instructions:

Attention!

Please see separate data sheet for ESX10-TB-101-DC 24 V-16 A.

Description of ESX10-T signal inputs and outputs see wiring diagrams.

Notes

- The user should ensure that the cable cross sections of the relevant load circuit are suitable for the current rating of the ESX10-T used.
- Automatic start-up of machinery after shut down must be prevented (Machinery Directive 98/37/EG and EN 60204-1). In the event of a short circuit or overload the load circuit will be disconnected electronically by the ESX10-T.

Information on UL approvals/CSA approvals

ESX10-TA/-TB UL1604

UL File # E320024

Operating Temperature Code T5

- This equipment is suitable for use in Class I, Division 2, Groups A, B, C and D or non-hazardous locations only

WARNING

 Exposure to some chemicals may degrade the sealing properties of materials used in the following device: relay Sealant Material:

Generic Name: Modified diglycidyl ether of bisphenol A

Supplier: Fine Polymers Corporation
Type: Epi Fine 4616L-160PK

Casing Material:

Generic Name: Liquid Crystal Polymer Supplier: Sumitomo Chemical Type: E4008, E4009, or E6008

RECOMMENDATION:

 Periodically inspect the device named above for any degradation of properties and replace if degradation is found

WARNING - EXPLOSION HAZARD:

- Do not disconnect equipment unless power has been removed or the area is known to be non-hazardous
- Substitution of any components may impair suitability for Class I, Division 2

ESX10-TD

Schematic diagram similar to ESX10-TB, without signal busbars (on top)

Time/Current characteristic curve (T_A = 25 °C)

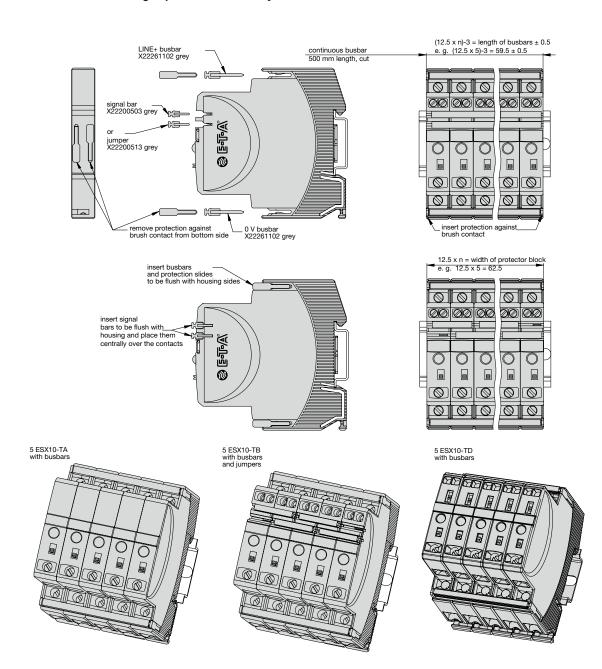

- \bullet The trip time is typically 3 s in the range between 1.1 and 1.8 x I_N (e.g. ESX10-TB-...-6 A)
- Electronic current limitation I_{Limit} occurs at typically 1.8 x I_N which means that under all overload conditions (independent of the power supply and the resistance of the load circuit) the max. overload before disconnection will not exceed 1.8 x I_N times the current rating. The individual current limitation value I_{Limit} depends on the current rating (see table1). Trip time is between 100 ms and 3 sec (depending on overload or at short circuit).
- Without this current limitation a considerably higher overload current would flow in the event of an overload or short circuit.

Mounting examples for ESX10-T

The ESX10-T features an integral power distribution system.

Mounting procedure:

Before wiring insert busbars into protector block.

Max. 10 insertion/removal cycles for busbars.

Recommendation:

After 10 units the busbars and signal busbars should be interrupted and receive a new entry live

Table of lengths for busbars

(X 222 611 02 / X 222 005 03 or cut off, see accessories)

Group signalisation (series connection)

Type ESX10-TA-100-DC24V-0.5A can be used as a supply module including protection of auxiliary circuit Optional: passive supply module AD-TX-EM01 (without protection)

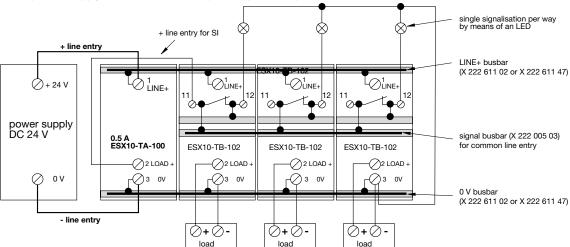

ESX10-TB-102

Single signalisation with common line entry

Type ESX10-TA-100-DC24V-0.5A can be used as a supply module

including protection of auxiliary circuit

Optional: passive supply module AD-TX-EM01 (without protection)

② [□□A ESX10-T.-DC 24 V- Accessories / Installation guidelines and safety instructions

Description

The ESX10-T features an integral power distribution system. The following wiring modes are possible with various pluggable current and signal busbars:

- LINE +(DC 24 V)
- 0 V

Caution: The electronic devices ESX10-T require a 0 V connection

- signal contacts
- reset inputs

Accessories

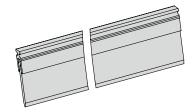

Busbars for LINE+ and 0 V

max. load with one line entry (recommended: centre line entry) max. load with two line entries grey insulation, length: 500 mm

50 A

63 A I_{max}

X 222 611 02

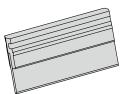

Busbars for LINE+ and 0 V

grey insulation

max. number of plug-on operations 10:

X 222 611 22 (2-unit-block ESX10-T), length: 22 mm X 222 611 34, (3-unit-block ESX10-T), length: 34.5 mm X 222 611 47, (4-unit-block ESX10-T), length: 47 mm X 222 611 59, (5-unit-block ESX10-T), length: 59.5 mm packing unit: 10 pcs

X 222 611 97, (8-unit-block ESX10-T), length: 97 mm X 222 611 12, (10-unit-block ESX10-T), length: 122 mm packing unit: 4 pcs

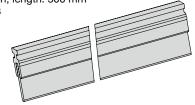

Signal busbars for signal contacts and reset inputs

suitable for signal busbar ESX10-TB-... max. load with one line entry

with one series connection of signal contacts I_{max}

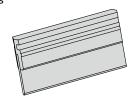

Jumpers for signal contacts

suitable for jumper ESX10-TB-... grey insulation, length: 21 mm X 222 005 13

packing unit: 10 pcs

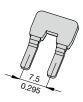

Insulated wire bridge

optional as jumper for ESX10-TB-101.../ESX10-TD-101... for group signalisation (series connection)

X 223 108 01

packing unit: 10 pcs

Connector bus link -K10

suitable for auxiliary contacts (series connection) **X 210 589 02** (1.5 mm², brown),
