

High Current, High Speed LDO Regulators, Voltage Detector Function

■ GENERAL DESCRIPTION

The XC6403/04 series are highly precise, low noise, high current, positive voltage low dropout regulators with built-in voltage detector. They are fabricated using Torex's CMOS process. Performance features of the series includes high ripple rejection and low dropout voltage, and the series features a voltage reference, an error amplifier, a current limiter and a phase compensation circuit plus a driver transistor.

Detect voltage is selectable in 100mV increments within the range of 0.9V to 5.6V and the LDO output voltage is selectable within a range of 0.9V to 5.6V (XC6403) 0.9V to 5.1V (XC6404), also in 100mV increments. The series is also compatible with low ESR ceramic capacitors which give added output stability. This stability can be maintained even during load fluctuations due to the excellent transient response of the series. The current limiter's foldback circuit also operates as a short circuit protection for the output current limiter and the output pin. The series provides options to the user to select from a variety of circuit features, such as detector monitoring, detector output logic, CE and EN pin input logic, internal pull-up / down resistance, and power ready. The IC's internal regulator circuit can be placed in stand-by mode via the EN function (XC6403/04 A to C series). The whole IC can be put in to stand-by mode via the CE function with the XC6403/04D series (semi-custom). In the stand-by mode, power consumption is greatly reduced. The XC6403/04A and B series features the toggle operation function. The regulator output can be OFF when the XC6403/04B series detects voltage (semi-custom). The XC6403/04E series can monitor another power source by using the VSEN pin (semi-custom). The XC6403/04F series can delay the detector output: the delay time can be controlled by the use of an external capacitor (semi-custom).

■ APPLICATIONS

- CD-ROM, CD-R / RW drive
- DVD drive
- HDD drive
- Cameras, Video recorders
- Portable AV equipment
- Battery powered equipment

■ FEATURES

Maximum Output Current	: More than 300mA (380mA limit) (1.8V ≤ V _{ROUT} ≤ 5.3V) [XC6403] More than 500mA (600mA limit) (2.5V ≤ V _{ROUT} ≤ 4.9V) [XC6404]
Dropout Voltage	: 200mV @ 100mA
Operating Voltage Range	: 2.0V ~ 6.0V
VR Output Voltage	: 0.9V ~ 5.6V [XC6403] 0.9V ~ 5.1V [XC6404]
Detect Voltage	: 0.9V ~ 5.5V (± 2%) More than 2.0V (V _{IN} sensing)
VR.VD Temp. Coefficient	: ±100ppm/°C (TYP.)
Low Power Consumption	: 35 μA (TYP.)
High Ripple Rejection	: 65dB @10kHz
Highly Accurate	: ±2%
Operating Temperature	: - 40 ~ 85°C
Low ESR Capacitor Compatible	
Ultra Small Packages	: SOT-25 SOT-89-5 USP-6B

Environmentally Friendly: EU RoHS Compliant, Pb Free

■ TYPICAL APPLICATION CIRCUITS

XC6403A ~ D Series

XC6403E Series

XC6403F Series

XC6404A ~ D Series

XC6404E Series

XC6404F Series

XC6403/XC6404 Series

PIN CONFIGURATION

PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTION
SOT-25	SOT-89-5	USP-6B		
1	1	3	VIN	Power Input
2	2	5	VSS	Ground
3	5	1	EN	VR ON / OFF Control
3	5	1	CE	ON / OFF Control
3	5	1	VSEN	VD Monitoring
3	5	1	Cd	Delay Capacitor Connection
4	4	6	VDOUT	VD Output
5	3	4	VROUT	VR Output
-	-	2	NC	No connection

*The dissipation pad for the USP-6B package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the Vss pin.

PRODUCT CLASSIFICATION

● Selection Guide

1. TOGGLE FUNCTION, VD SELF-SATURATION AS OPTION

SERIES	TOGGLE FUNCTION (BUILT-IN)
XC6403/04A	VD with Toggle Function
XC6403/04B	VD with Toggle Function and Self-Saturation
XC6403/04C ~ F	VD with No Toggle Function

2. STAND-BY MODE FUNCTION AS OPTION

SERIES	STAND-BY MODE FUNCTION
XC6403/04A ~ C	VR with Stand-By Mode Function
XC6403/04D	Chip Stand-By Mode Function
XC6403/04E, F	No Stand-By Mode Function

3. CE / EN INPUT LOGIC, INTERNAL PULL-UP/DOWN AS OPTION (*A ~ D Series)

SERIES	CE INPUT LOGIC
XC6403/04 * A ~ D	High Active with Pull Down
XC6403/04 * E ~ K	High Active with No Pull Down
XC6403/04 * L ~ P	Low Active with Pull Up
XC6403/04 * R ~ U	Low Active with No Pull Up

4. VD SENSE AS OPTION (*A ~ D and F Series)

SERIES	VD SENSE PIN
XC6403/04 * A, B, E, F, L, M, R, S, V, X	VIN
XC6403/04 * C, D, H, K, N, P, T, U, Y, Z	VOUT
XC6403/04 E V ~ Z	VSEN

5. VD OUTPUT LOGIC AS OPTION

SERIES	VD OUTPUT LOGIC FUNCTION
XC6403/04A ~ F	Detect L or Detect H

6. VD DELAY FUNCTION AS OPTION

SERIES	DELAY FUNCTION
XC6403/04A ~ E	No Delay
XC6403/04F	Delay Time Adjustable by Connecting Cd

OPERATIONAL EXPLANATION

<Output Voltage Regulator Control>

The voltage, divided by resistors R1 & R2 which are connected to the V_{ROUT} pin is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET, which is connected to the V_{ROUT} pin, is then driven by the subsequent output signal. The output voltage at the V_{ROUT} pin is controlled & stabilized by negative feedback. The current limit circuit and short circuit protection operate in relation to the level of output current. Further, the voltage regulator's internal circuitry can be shutdown via the EN or CE pin's signal.

<Detector Function with the XC6403/04 Series>

The series' detector function monitors the voltage divided by resistors R3 & R4 which are connected to the V_{ROUT} pin or the V_{IN} pin or the V_{SEN} pin, as well as monitoring the voltage of the internal reference voltage source via the comparator. The V_{DSEN} pin has options (please refer to the Selection Guide, item 4). A 'High' or 'Low' signal level can be output from the V_{DOUT} pin when the V_D pin voltage level goes below the detect voltage. The V_D output logic has options (please refer to the Selection Guide, item 5). As V_{DOUT} is an open-drain N-channel output, a pull-up resistor of about 220kΩ is needed to achieve a voltage output. Because of hysteresis at the detector function, output at the V_{DOUT} pin will invert when the detect voltage level increases above the release voltage (105% of the detect voltage). Even when the XC6403/04A, B, C, series are in stand-by mode, the voltage detector function operates and the output voltage at V_{DOUT} will output according to the voltage level at V_{DSENSE} voltage.

For the XC6403/04A, B, C types, in stand-by, if a voltage of the recovery voltage is present at the V_{ROUT} pin (from another power source), the V_{DOUT} pin will be high impedance mode, and the pull up voltage will be output at V_{DOUT}. By connecting the C_{delay} pin to a capacitor (Cd), the XC6403/04F series can apply a delay time to V_{DOUT} voltage when releasing voltage. The delay time can be calculated from the internal resistance, R_{delay} (2MΩ fixed) and the value of Cd as per the following equation.

$$Delay\ Time = C_{delay} \times R_{delay} \times 0.7$$

Delay Time R_{delay} standard : 1.0 ~ 3.5MΩ TYP : 2.0MΩ

C _{delay}	DELAY TIME (TYP.)	DELAY TIME (TYP.)
0.01 μF	14 msec	7.0 ~ 24.5 msec
0.022 μF	30.8 msec	15.4 ~ 53.9 msec
0.047 μF	65.8 msec	32.9 ~ 115.15 msec
0.1 μF	140 msec	70.0 ~ 245.0 msec
0.22 μF	308 msec	154.0 ~ 539.0 msec
0.47 μF	658 msec	329.0 ~ 1151.5 msec
1 μF	1400 msec	700.0 ~ 2450.0 msec

<Low ESR Capacitors>

With the XC6403/04 series regulator, a stable output voltage is achievable even if low ESR capacitors are used, as a phase compensation circuit is built-in to the regulator. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor (C_L) be connected as close as possible, between the output pin (V_{ROUT}) and the V_{SS} pin. Please use an output capacitor (C_L) with a capacitance, based on the chart below. We also suggest an input capacitor (C_{IN}) of 1 μF : this should be connected between V_{IN} and V_{SS} in order to stabilize input power source.

Output Capacitor

V _{ROUT}	0.9 ~ 1.2V	1.3 ~ 1.7V	1.8 ~
C _L	More Than 4.7 μF	More Than 2.2 μF	More Than 1.0 μF

<Current Limiter, Short-Circuit Protection>

The XC6403/04 series regulator offers a combination of current limit and circuit protection by means of a built-in fixed current limiter circuit and a foldback circuit. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, the output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows.

■ OPERATIONAL EXPLANATION (Continued)

<EN / CE Pin>

The IC's internal regulator circuitry can be shut down via the signal from the EN pin with the XC6403/04A, B, C series. In shutdown mode, output at the V_{ROUT} pin will be pulled down to the V_{SS} level via R1 & R2. The whole IC's circuitry can be shut down via CE pin with the XC6403/04D series and power consumption can be reduced to around 0 μA (TYP.). While the voltage detector is in shutdown mode, the voltage detector output is in a post-detection state. When choosing Detect L, input current can be set by using the following formula.

$$\text{Input Current} = V_{IN} \text{ voltage} / \text{Pull-Up Resistance}$$

In stand-by mode, the above input current can be reduced by connecting a pull-up resistor between V_{ROUT} and V_{DOUT}.

Note that as the XC6403/04 *E to K types of the XC6404A to D series are 'High Active / No Pull-Down' and XC6403/04 *R to U types of the XC6404A to D series are 'Low Active / No Pull-Up', operations will become unstable with the CE pin open (See the chart below).

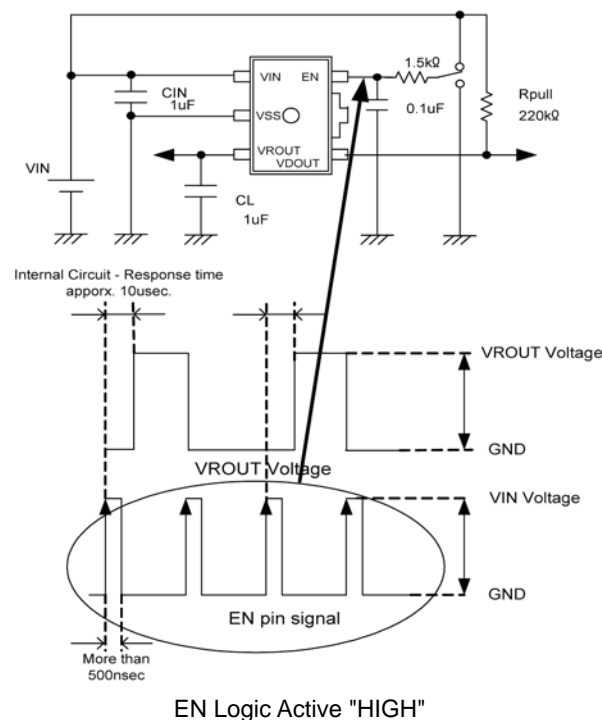

SERIES	EN/CE INPUT LOGIC
XC6403/04 * A ~ D	High Active with Pull-Down
XC6403/04 * E ~ K	High Active with No Pull-Down
XC6403/04 * L ~ P	Low Active with Pull-Up
XC6403/04 * R ~ U	Low Active with No Pull-Up

(* A ~ D Series)

We suggest that you use this IC with either a V_{IN} voltage or a V_{SS} voltage input at the EN or CE pin. If this IC is used with the correct specifications for the EN or CE pin, the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry if a voltage other than V_{IN} or V_{SS} is applied.

<Toggle Operation>

The XC6403/04 A and B series have a built-in toggle ON/OFF switch which repeats an on/off operation via the EN pin's leading edge signal when the EN logic is Active HIGH, and via the EN pin's falling edge signal when the EN logic is Active LOW (Please also refer the figure below). The EN input signal duration should be over 500nsec. If the EN input signal is less than 500nsec, it is possible that the circuit fails to respond and the toggle function does not operate. To operate the toggle function properly when the EN pin voltage noise is large, a RC filter should be used to reduce the noise in the signal to the EN pin. In the case where input delay time is required, it is possible to set the time constant by connecting an RC network to the EN pin.

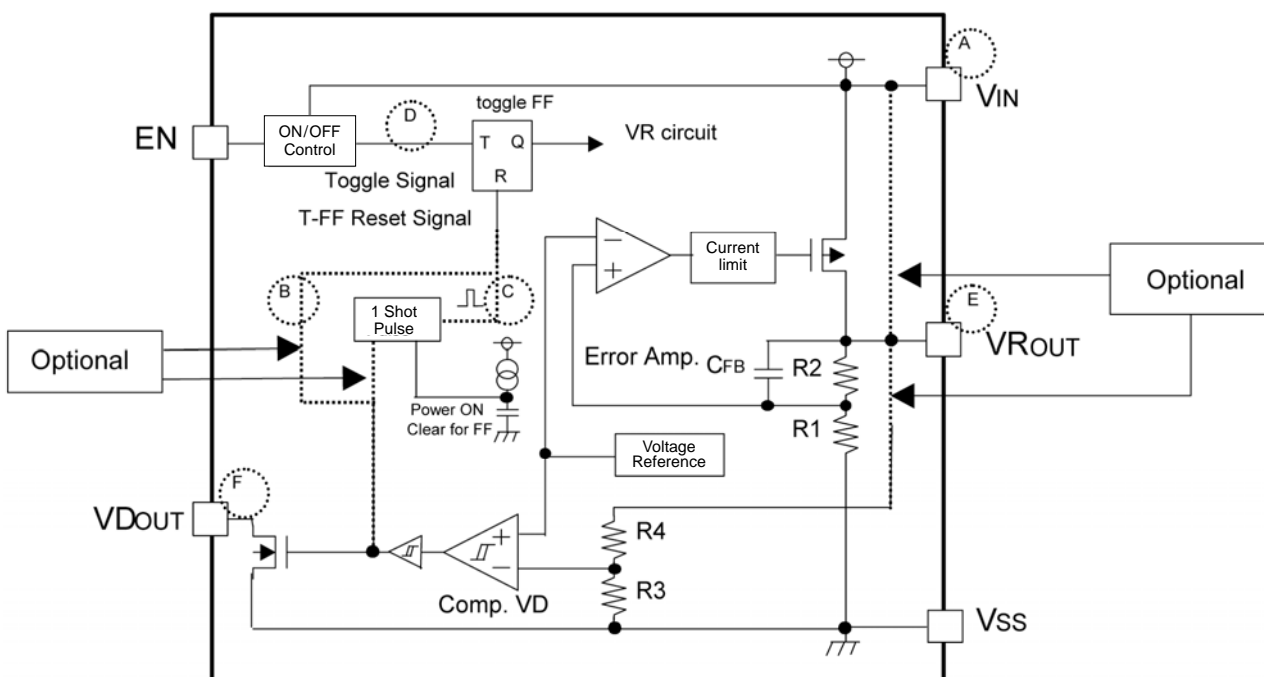

OPERATIONAL EXPLANATION (Continued)

<Toggle Operation> (Continued)

For the XC6403/04B series, there are two types of toggle selection; one is a T-type flip-flop (T-FF) used for toggle operation which can be reset internally by a signal directly from the voltage detector (V_{IN} Sense type only. See also the Selection Guide). The other type is where the reset is applied internally through a one shot pulse circuit

(V_{IN} , V_{ROUT} type only. See also the Selection Guide). The type, which applies the reset directly via the signal from the voltage detector function, applies the voltage detector comparator's output signal (reset signal) to the reset of T-FF reset, and turns the VR output OFF when the input voltage decreases below the detect voltage due to battery consumption, etc.. In order to return the VR output, apply a voltage larger than the release voltage to V_{IN} and input a toggle signal to the T-FF. In the case where input voltage is below the release voltage, the VR output does not return even though the toggle signal is input into the T-FF.

The type which applies the reset signal to the T-FF internally via a one-shot pulse circuit changes the voltage detector comparator output signal to a one-shot signal internally. Like the type which applies the reset directly via the signal from voltage detector function, this type also applies the reset to the T-FF and sets the VR output to OFF when the input voltage (V_{IN} Sense type) and output voltage (V_{ROUT} Sense type) drop below the detect voltage level. This type can return the VR output by inputting a toggle signal, even when the Sense pin voltage (V_{IN} or V_{ROUT} pin voltage) is below the release voltage. Please refer to the block diagram below and the timing chart on the following page. Please choose the option suitable to the application.

Block Diagram for XC6403/04B series Timing Chart

TIMING CHART

XC6403/04B Series

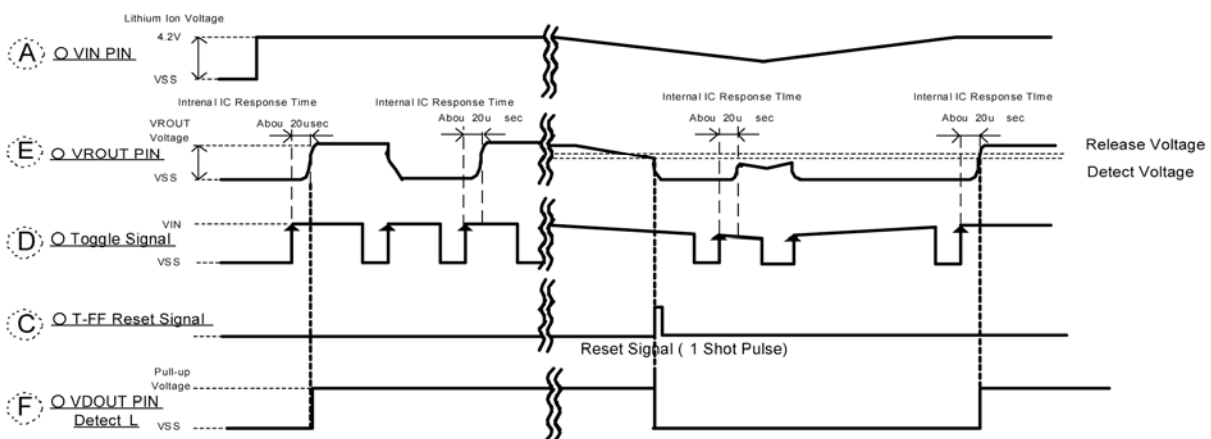

- Using the VD output level signal as the reset signal of T-FF (VD Sense = VIN PIN)

- Changing the VD output level signal into a one shot pulse to use T-FF as the reset signal (VD Sense = VIN PIN)

- Changing the VD output level signal into a one shot pulse to use T-FF as the reset signal (VD Sense = VROUT PIN)

The circled letters correspond to those shown on the block diagrams.

■ NOTES ON USE

1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen V_{IN} and V_{SS} wiring in particular.
3. Please wire the input capacitor (C_{IN}) and the output capacitor (C_L) as close to the IC as possible.
Should rapid input fluctuation or load fluctuation occur, please increase the capacitor value such as C_{IN} or C_L to stabilize the operation.

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

●XC6403/04 Series (Continued)

(3) Dropout Voltage vs. VR Output Current

XC6403/04 Series (VR: 1.8V)

XC6403/04 Series (VR: 2.5V)

XC6403/04 Series (VR: 3.0V)

XC6403/04 Series (VR: 5.0V)

XC6403/04 Series (VR: 0.9V)

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

●XC6403/04 Series (Continued)

(4) Supply Current vs. Input Voltage

XC6403/04 Series (VR: 1.8V)

XC6403/04 Series (VR: 2.5V)

XC6403/04 Series (VR: 3.0V)

XC6403/04 Series (VR: 5.0V)

XC6403/04 Series (VR: 0.9V)

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

● XC6403/04 Series (Continued)

(5) VR Output Voltage vs. Ambient Temperature

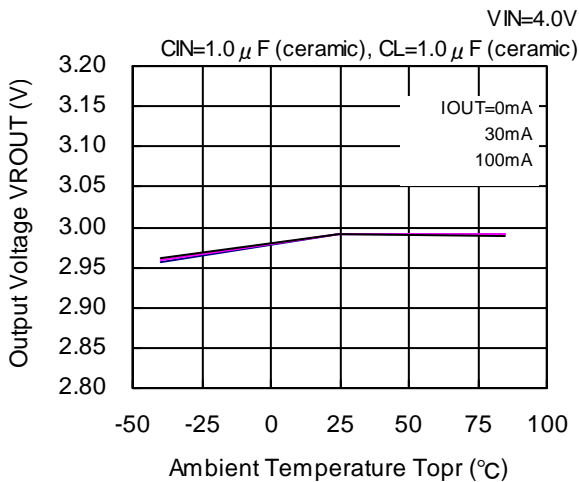

XC6403/04 Series (VR: 1.8V)

XC6403/04 Series (VR: 2.5V)

XC6403/04 Series (VR: 3.0V)

XC6403/04 Series (VR: 5.0V)

XC6403/04 Series (VR: 0.9V)

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

●XC6403/04 Series (Continued)

(6) Supply Current vs. Ambient Temperature

XC6403/04 Series (VR: 1.8V)

XC6403/04 Series (VR: 2.5V)

XC6403/04 Series (VR: 3.0V)

XC6403/04 Series (VR: 5.0V)

XC6403/04 Series (VR: 0.9V)

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

●XC6403/04 Series (Continued)

(7) EN/CE Threshold Voltage vs. Ambient Temperature

(8) Rdelay vs. Ambient Temperature

(9) Output Noise Density

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

●XC6403/04 Series (Continued)

(10) VD Supply Current vs. Input Voltage (Only A ~ C Types)

XC6403/04 Series (VD: 2.0V)

XC6403/04 Series (VD: 2.7V)

XC6403/04 Series (VD: 3.6V)

XC6403/04 Series (VD:5.0V)

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

●XC6403/04 Series (Continued)

(11) Detect Voltage, Release Voltage vs. Ambient Temperature

XC6403/04 Series (VD: 2.0V)

XC6403/04 Series (VD: 2.7V)

XC6403/04 Series (VD: 3.6V)

XC6403/04 Series (VD: 5.0V)

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

● XC6403/04 Series (Continued)

(12) VD N-ch Driver Output Current vs. VDS

XC6403/04 Series (VD: 2.4V)

XC6403/04 Series (VD: 2.7V)

XC6403/04 Series (VD: 3.6V)

XC6403/04 Series (VD: 5.0V)

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

● XC6403/04 Series (Continued)

(13) VDN N-ch Driver Output Current vs. Input Voltage

XC6403/04 Series (VD: 2.0V)

XC6403/04 Series (VD: 2.7V)

XC6403/04 Series (VD: 3.6V)

XC6403/04 Series (VD: 5.0V)

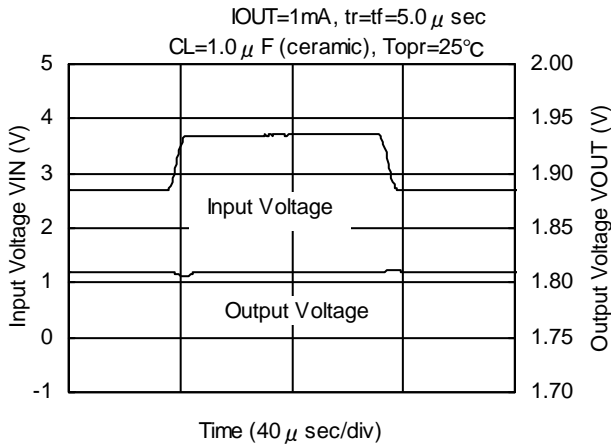

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

●XC6403/04 Series (Continued)

(14) Input Transient Response

XC6403/04 Series (VR: 1.8V)

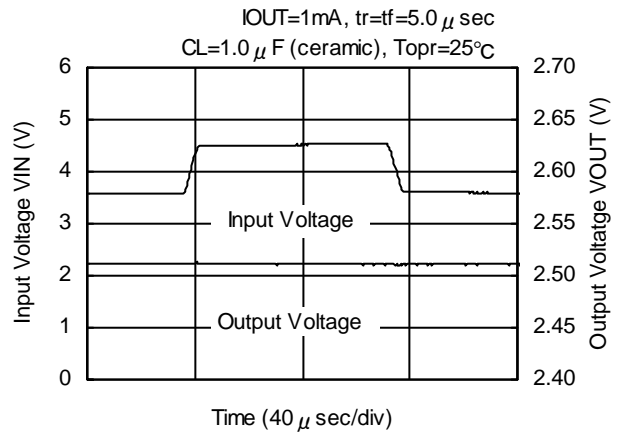

XC6403/04 Series (VR: 1.8V)

XC6403/04 Series (VR: 1.8V)

XC6403/04 Series (VR: 2.5V)

XC6403/04 Series (VR: 2.5V)

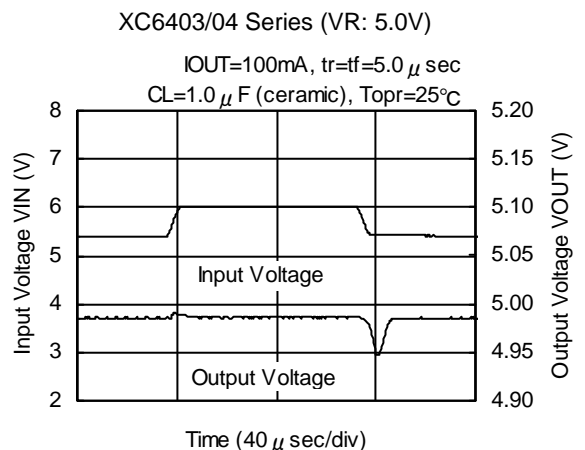

XC6403/04 Series (VR: 2.5V)

■ TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

● XC6403/04 Series (Continued)

(14) Input Transient Response (Continued)

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

XC6403/04 Series (VR: 0.9V)

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

(16) Ripple Rejection Rate

MARKING RULE

● SOT-25 / SOT-89-5

① represents product series

MARK	PRODUCT SERIES
<u>3</u>	XC6403xxxxxx
<u>4</u>	XC6404xxxxxx

②③ represents internal sequential number
Sequential numbering rule

1) Order

MARK	NUMBERING RULE
1	01~09
2	10~99
3	A0~A9
4	B0~B9
5	~Z9

*G, I, J, O, Q, W excluded

2) The same marking is printed on the product with same optional functions, product type, detect voltage, and output voltage although packages are different.

④ represents production lot number
0 to 9, A to Z reverse character 0 to 9, A to Z repeated (G, I, J, O, Q, W excluded)

● USP-6B

① represents product series

MARK	PRODUCT SERIES
2	XC6403xxxxDx
3	XC6404xxxxDx

② represents optional functions

MARK	OPTIONAL FUNCTIONS	PRODUCT SERIES
A	Toggle and EN Function	XC6403/04AxxDx
B	Toggle, EN Function, VD signal/VR OFF Function	XC6403/04BxxDx
C	EN Function	XC6403/04CxxDx
D	CE Function	XC6403/04DxxDx
E	VSEN Pin	XC6403/04ExxDx
F	Cd Pin	XC6403/04FxxDx

MARKING RULE (Continued)

● USP-6B (Continued)

③ represents product type

MARK	CE/EN FUNCTION	EN / CE LOGIC	PULL-UP/DOWN RESISTANCE	VD SENSE PIN	VD OUTPUT LOGIC	PRODUCT SERIES
A	Function	High Active	Pull-Down Function	V _{IN}	Detect L	XC6403/04xAxxDx
B	Function	High Active	Pull-Down Function	V _{IN}	Detect H	XC6403/04xBxxDx
C	Function	High Active	Pull-Down Function	V _{ROUT}	Detect L	XC6403/04xCxxDx
D	Function	High Active	Pull-Down Function	V _{ROUT}	Detect H	XC6403/04xDxxDx
E	Function	High Active	Nonfunctional	V _{IN}	Detect L	XC6403/04xExxDx
F	Function	High Active	Nonfunctional	V _{IN}	Detect H	XC6403/04xFxxDx
H	Function	High Active	Nonfunctional	V _{ROUT}	Detect L	XC6403/04xHxxDx
K	Function	High Active	Nonfunctional	V _{ROUT}	Detect H	XC6403/04xKxxDx
L	Function	Low Active	Pull-Up Function	V _{IN}	Detect L	XC6403/04xLxxDx
M	Function	Low Active	Pull-Up Function	V _{IN}	Detect H	XC6403/04xMxxDx
N	Function	Low Active	Pull-Up Function	V _{ROUT}	Detect L	XC6403/04xNxxDx
P	Function	Low Active	Pull-Up Function	V _{ROUT}	Detect H	XC6403/04xPxxDx
R	Function	Low Active	Nonfunctional	V _{IN}	Detect L	XC6403/04xRxxDx
S	Function	Low Active	Nonfunctional	V _{IN}	Detect H	XC6403/04xSxxDx
T	Function	Low Active	Nonfunctional	V _{ROUT}	Detect L	XC6403/04xTxxDx
U	Function	Low Active	Nonfunctional	V _{ROUT}	Detect H	XC6403/04xUxxDx
V	Nonfunctional	-	-	V _{IN} / V _{SEN}	Detect L	XC6403/04xVxxDx
X	Nonfunctional	-	-	V _{ROUT} /V _{SEN}	Detect H	XC6403/04xXxxDx
Y	Nonfunctional	-	-	V _{ROUT} /V _{SEN}	Detect L	XC6403/04xYxxDx
Z	Nonfunctional	-	-	V _{ROUT} /V _{SEN}	Detect H	XC6403/04xZxxDx

④,⑤ represents output voltage and detect voltage
ex.)

MARK		OUTPUT VOLTAGE		PRODUCT SERIES
④	⑤	V _{ROUT} (V)	V _{DOUT} (V)	
3	0	4.0	4.3	XC6403/04**30D*

⑥ represents production lot number
0 to 9,A to Z repeated (G, I, J, O, Q, W excluded)
Note: No character inversion used.
