

0.6  $\mu$ A Ultra Low Power Consumption Small Voltage Regulator ( $C_L$  Capacitor-Less)

## ■ GENERAL DESCRIPTION

The XC6504 series is a highly accurate CMOS voltage regulator that achieves very low supply current operation of 0.6  $\mu$ A. Even output current is 1  $\mu$ A (when light load), the XC6504 can provide high accurate outputs, which is ideally suited for the applications to draw less output current. The usage of super small package USPN-4B02 (0.75 x 0.95mm) and the advantage of capacitor-less stable operation can contribute the board space saving outstandingly. The IC consists of a reference voltage source, an error amplifier, a driver transistor, over-current protection circuit, and a phase compensation circuit.

The device is compatible with a low ESR ceramic output capacitor  $C_L$ . Moreover, the device can provide stable output even without a  $C_L$  output capacitor because of the excellent internal phase compensation.

Output voltage is fixed internally by laser trimming technology and can be selectable in 0.1V increments within the range of 1.1V to 5.0V. The CE function enables the device to be put into standby mode by inputting a low level signal to the CE pin thereby reducing current consumption to less than 0.1  $\mu$ A. In the standby mode, if a  $C_L$  output capacitor is used, the electric charge stored at  $C_L$  can be discharged via the internal switch and as a result, the  $V_{OUT}$  pin quickly returns to the  $V_{SS}$  level.

## ■ APPLICATIONS

- Mobile devices / terminals
- Wireless LAN
- Modules (wireless, cameras, etc.)

## ■ FEATURES

Supply Current	: 0.6 $\mu$ A
Input Voltage Range	: 1.4V~6.0V
Output Voltage Range	: 1.1V~5.0V (0.1V increments)
Output Accuracy	: $\pm 0.02V @ V_{OUT} < 2.0V$ $\pm 1% @ V_{OUT} \geq 2.0V$
Temperature Stability	: $\pm 50\text{ppm}/^\circ\text{C}$
Maximum Output Current	: 150mA
Low On Resistance	: $3.3\Omega @ V_{OUT}=3.0V$
Standby Current	: 0.01 $\mu$ A
Protection Current	: Current Limiter Shot Circuit Protection
CE Function	: $C_L$ Auto Discharge ON/OFF Logic=Enable High
Output Capacitor	: Low ESR Ceramic Capacitor ( $C_L$ Capacitor-Less Compatible)
Operating Ambient Temperature	: $-40^\circ\text{C} \sim +85^\circ\text{C}$
Packages	: USPN-4B02 SSOT-24 SOT-25 USPQ-4B04
Environmentally Friendly	: EU RoHS Compliant, Pb Free

## ■ PIN CONFIGURATION

\*The dissipation pad for the USPQ-4B04 package should be solder-plated in reference mount pattern and metal masking so as to enhance mounting strength and heat release.  
If the pad needs to be connected to other pins, it should be connected to the V<sub>SS</sub> (No. 2) pin.

## OPERATIONAL EXPLANATION

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier. The V<sub>OUT</sub> pin is then driven by the subsequent output signal. The output voltage at the V<sub>OUT</sub> pin is controlled and stabilized by a system of negative feedback.

XC6504 Series, Type A

### <Current Limiter, Short-Circuit Protection>

The XC6504 series includes a combination of a fixed current limiter circuit & a foldback circuit, which aid the operations of the current limiter and circuit protection. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, output voltage drops further and output current decreases.

### <CE Pin>

The XC6504 internal circuitry can be shutdown via the signal from the CE pin with the XC6504 series. In shutdown mode with CE low level voltage is input, output at the V<sub>OUT</sub> pin will be pulled down to the V<sub>SS</sub> level via parallel to R1 & R2 and C<sub>L</sub> discharge resistance (R<sub>DCHG</sub>).

If this IC is used with the correct output voltage for the CE pin, the logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry when medium voltage is input. The output voltage becomes unstable when the CE pin is opened.

### <CL Auto-Discharge Function>

The XC6504 series can quickly discharge the electric charge at the output capacitor (C<sub>L</sub>), when a low signal to the CE pin, which enables a whole IC circuit put into OFF state, is inputted via an internal switch located between the V<sub>OUT</sub> pin and the V<sub>SS</sub> pin. In this state, the application is protected from a glitch operation caused by the electric charge at the output capacitor (C<sub>L</sub>).

Moreover, discharge time of the output capacitor (C<sub>L</sub>) is set by the C<sub>L</sub> auto-discharge resistance (R<sub>DCHG</sub>) and the output capacitor (C<sub>L</sub>). By setting time constant of a C<sub>L</sub> auto-discharge resistance value (R<sub>DCHG</sub>) and an output capacitor value (C<sub>L</sub>) as  $\tau$  ( $\tau = C_L \times R_{DCHG}$ ), the output voltage after discharge via the internal switch is calculated by the following formulas. Please also note R<sub>DCHG</sub> is depended on V<sub>IN</sub> and When V<sub>IN</sub> is high, R<sub>DCHG</sub> is low.

$$V = V_{OUT(E)} \times e^{-t/\tau} \text{ or } t = \ln(V_{OUT(E)} / V)$$

V: Output voltage after discharge

V<sub>OUT(E)</sub>: Output voltage

t: Discharge time

$\tau$  : C<sub>L</sub> x R<sub>DCHG</sub>

### <Low ESR Capacitors>

The XC6504 series can provide a stable output voltage even if without C<sub>L</sub> capacitor or with a low ESR C<sub>L</sub> capacitor because of a built-in phase compensation circuit. In case of adding a C<sub>L</sub> capacitor, we suggest that an output capacitor (C<sub>L</sub>) is connected as close as possible to the V<sub>OUT</sub> pin and the V<sub>SS</sub> pin. When V<sub>IN</sub> stabilization is needed, please place an input capacitor (C<sub>IN</sub>) as close as to the V<sub>IN</sub> pin and the V<sub>SS</sub> pin.

## ■ NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please keep the resistance low between  $V_{IN}$  and  $V_{SS}$  wiring in particular.
3. Please wire the input capacitor ( $C_{IN}$ ) and the output capacitor ( $C_L$ ) as close to the IC as possible.
4. Capacitances of these capacitors ( $C_{IN}$ ,  $C_L$ ) are decreased by the influences of bias voltage and ambient temperature. Care shall be taken for capacitor selection to ensure stability of phase compensation from the point of ESR influence.
5. Torex places an importance on improving our products and their reliability.  
We request that users incorporate fail-safe designs and post-aging prevention treatment when using Torex products in their systems.

- Each layer is connected to the package heat-sink and terminal pin No.1.
- Each layer has approximately 800mm<sup>2</sup> copper area
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6mm
- Through-hole: 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient Temperature

Board Mount ( $T_j \text{ max} = 125^\circ\text{C}$ )

Ambient Temperature ( $^\circ\text{C}$ )	Power Dissipation $P_d$ (mW)	Thermal Resistance ( $^\circ\text{C}/\text{W}$ )

**USPN-4B02 Power Dissipation (40mm x 40mm Standard board)**

Power dissipation data for the USPN-4B02 is shown in this page.  
The value of power dissipation varies with the mount board conditions.  
Please use this data as the reference data taken in the following condition.

1. Measurement Condition

- Condition : Mount on a board
- Ambient : Natural convection
- Soldering : Lead (Pb) free
- Board: Dimensions 40 x 40 mm  
(1600 mm<sup>2</sup> in one side)
- Copper (Cu) traces occupy 50% of the front and 50% of the back.
- The copper area is divided into four block, one block is 12.5% of total.
- The USPN-4 package has for terminals.
- Each terminal connects one copper block in the front and one in the back.
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.4 Diameter

Evaluation Board (Unit: mm)

2. Power Dissipation vs. Ambient Temperature

Board Mount (T<sub>j</sub> max = 125°C)

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	550	181.82
85	220

### SSOT-24 Power Dissipation(40mm x 40mm Standard board)

Power dissipation data for the SSOT-24 is shown in this page.  
 The value of power dissipation varies with the mount board conditions.  
 Please use this data as the reference data taken in the following condition.

#### 1. Measurement Condition

- Condition : Mount on a board
- Ambient : Natural convection
- Soldering : Lead (Pb) free
- Board : Dimensions 40 x 40 mm  
 (1600 mm<sup>2</sup> in one side)
- Copper (Cu) traces occupy 50% of the board area in top and back faces
- Package heat-sink is tied to the copper traces
- Material : Glass Epoxy (FR-4)
- Thickness : 1.6mm
- Through-hole : 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient Temperature

Board Mount ( $T_j$  max = 125°C)

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	500	200.00
85	200

**SOT-25 Power Dissipation (40mm x 40mm Standard board)**

Power dissipation data for the SOT-25 is shown in this page.  
The value of power dissipation varies with the mount board conditions.  
Please use this data as the reference data taken in the following condition.

1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm  
(1600 mm<sup>2</sup> in one side)
- Copper (Cu) traces occupy 50% of the board area in top and back faces
- Package heat-sink is tied to the copper traces  
(Board of SOT-26 is used.)
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6mm
- Through-hole: 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

2. Power Dissipation vs. Ambient Temperature

Board Mount (T<sub>j</sub> max = 125°C)

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	600	166.67
85	240	

## MARKING RULE

SOT-25 (Under-dot)

\* SOT-25 with the under-dot marking is used.
