

HIGH DYNAMIC RANGE

Monolithic Amplifier

PGA-102+

50Ω 0.05 to 6 GHz

THE BIG DEAL

- 3.3V, 83mA operation
- High IP3, 33 dBm typ. at 2 GHz
- Gain, 14.0 dB typ. at 2 GHz
- P1dB 17.5 dBm typ. at 2 GHz
- Low noise figure, 2.4dB at 2 GHz
- No external matching components required

CASE STYLE: DF782

+RoHS Compliant

The +Suffix identifies RoHS Compliance. See our web site for RoHS Compliance methodologies and qualifications

APPLICATIONS

- Base station infrastructure
- Portable Wireless
- CATV & DBS
- MMDS & Wireless LAN
- LTE CATV, DOCSIS 3.1WLAN

PRODUCT OVERVIEW

PGA-102+ (RoHS compliant) is an advanced wideband amplifier fabricated using E-PHEMT technology and offers extremely high dynamic range over a broad frequency range and with low noise figure. In addition, the PGA-102+ has good input and output return loss over a broad frequency range without the need for external matching components and has demonstrated excellent reliability. It has repeatable performance from lot to lot and is enclosed in a SOT-89 package for very good thermal performance.

KEY FEATURES

Feature	Advantages
Broad Band: 0.05 to 6.0 GHz	Broadband covering primary wireless communications bands: Cellular, PCS, LTE, WiMAX
High IP3 Versus DC power Consumption: 33 dBm typical at 2 GHz at +3.3V Supply Voltage and only 83mA	The PGA-102+ provides good IP3 performance relative to device size and power consumption. The combination of the design and E-PHEMT Structure provides enhanced linearity over a broad frequency range as evidence in the IP3 being typically 15 dB above the P 1dB point. This feature makes this amplifier ideal for use in: <ul style="list-style-type: none"> • Driver amplifiers for complex waveform up converter paths • Drivers in linearized transmit systems • Secondary amplifiers in ultra High Dynamic range receivers
No External Matching Components Required	Unlike competing products, Mini-Circuits PGA-102+ provides Input and Output Return Loss of 16-19 dB up to 4 GHz without the need for any external matching components
Low Noise Figure: 2.3 dB up to 0.8 GHz	A unique feature of the PGA-102+ which separates this design from all competitors is the low noise figure performance in combination with the high dynamic range

MAXIMUM RATINGS⁵

Parameter	Ratings
Operating temperature (ground lead)	-40°C to 85°C
Storage temperature	-65°C to 150°C
Operating Current at 3.3V	300mA
Power dissipation	1.0W
Input power (CW)	+28 dBm
DC voltage on Pin 3	5.5V

⁵Permanent damage may occur if any of these limits are exceeded.
Electrical maximum ratings are not intended for continuous normal operation.

SIMPLIFIED SCHEMATIC AND PAD DESCRIPTION

Function	Pin Number	Description
RFIN	1	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
RF-OUT and DC-IN	3	RF output and bias pin. DC voltage is present on this pin; therefore a DC blocking capacitor is necessary for proper operation. An RF choke is needed to feed DC bias without loss of RF signal due to the bias connection, as shown in "Recommended Application Circuit", Fig. 2
GND	2,4	Connections to ground. Use via holes as shown in "Suggested Layout for PCB Design" to reduce ground path inductance for best performance.

CHARACTERIZATION TEST CIRCUIT

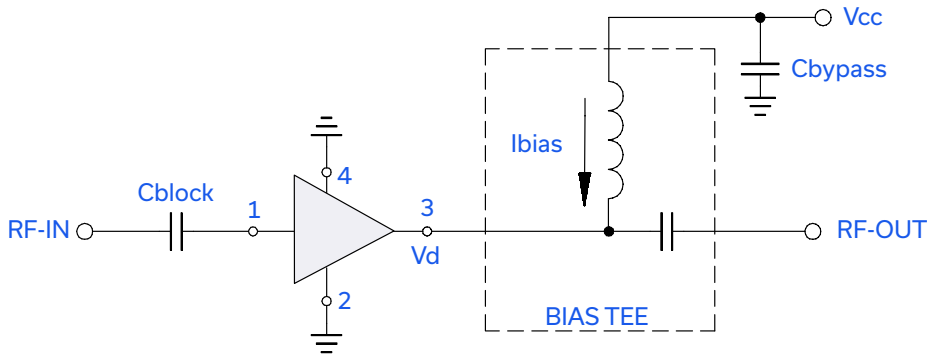

Fig 1. Block Diagram of Test Circuit used for characterization. (DUT tested on Mini-Circuits Characterization test board TB-313)
 Gain, Return loss, Output power at 1dB compression (P1 dB) , output IP3 (OIP3) and noise figure measured using Agilent's N5242A PNA-X microwave network analyzer.

Conditions:

1. Gain and Return loss: Pin= -25dBm
2. Output IP3 (OIP3): Two tones, spaced 10 MHz apart, 2.5 dBm/tone at output.

RECOMMENDED APPLICATION CIRCUIT

Cblock=0.001 μ F, Bias-Tee=TCBT-14+, Cbypass=0.1 μ F

Fig 2. Evaluation board includes case, connectors, and components soldered to PCB
