### **Product Overview**

The SXBP-29+ is a bandpass filter fabricated using SMT technology. The SXBP-29+ offer good matching within the passband and it has more than 40 dB rejection up to 1600 MHz. This unit uses a miniature high Q capacitors and wire welded inductors for high reliability. In addition it has repeatable performance across production lots and consistent performance across temperature.

## **Key Features**

Feature	Advantages			
Wide bandpass filter	This provides low signal distortion for broadband RF/IF application.			
More than 40dB rejection up to 1600MHz	This enables the filter to attenuate spurious signals and reject harmonics for a broad band of frequency.			
Small size of 0.44" x 0.74" x .27"	The surface mount package enables the SXBP-29+ to be used in compact designs.
