### PRODUCT OVERVIEW

New High Pass Filter HFCN-9700+ is an LTCC based filter, that extends the upper frequency cutoff range of the existing HFCN series to 9.7 GHz. Systems that previously relied on large distributed filter elements to support these lower frequencies can save space and system complexity by integrating the HFCN-9700+ into new designs. These filters are offered in a EIA 1206 package size and have a typical stop band rejection of 32 dB.

### KEY FEATURES

Feature	Advantages
Small Size	Available in the size of typical resistors or capacitors (EIA 1206), the ultra small HFCN series integrates an entire high pass filter into a simple SMT chip form factor.
High Power Handling	The HFCN series can withstand up to 7W CW signal without damage making this filter ideal for use in medium power to transmit paths.
Temperature Stability	Over a 155°C operating temperature range (-55°C to +100°C), the HFCN series ceramic filters typically exhibit low pass band insertion loss variation.
High Rejection	Achieving 32dB rejection from DC-6770 MHz; the HFCN-9700+ provides a versatile high pass configuration for many up converter applications.
