Product Overview

Mini-Circuits' LFCW-5000+ is an LTCC low pass filter with a passband from DC to 5000 MHz, supporting a variety of applications. This model provides 1.6 dB typical passband insertion loss and provides a very good stopband rejection due to strategically constructed layout with minimal interaction between components. It handles up to 2.5W RF input power and provides a wide operating temperature range from -55 to +125°C. Housed in a tiny 0603 ceramic form factor with wraparound terminations, the filter is ideal for dense PCB layouts and with minimal performance variation due to parasitics.

Key Features

| Feature | Advantages |
|--------------------------------------|---|
| Ultra-wide stopband | The LTCC lowpass filter provides a very good stopband rejection until 26.5 GHz suitable for high end applications. |
| LTCC Construction | Provides repeatable performance in a rugged, ceramic package well suited for tough environments such as high humidity and temperature extremes. |
| Tiny size (0.063" x 0.032" x 0.024") | Saves space in dense circuit board layouts and minimizes the effects of parasitics. |
| Good power handling, 2.5W | Supports a wide range of system power requirements. |
| Wrap-around terminations | Provides excellent solderability and easy visual inspection |
