Description

Y series of IO-Link masters fully satisfy the most demanding industrial communication needs. YN115CEI8RPIO is DIN rail mount fieldbus module with eight IO-Link ports, compatible with IO-Link V1.0 and V1.1. It is a gateway solution with support for EtherNet/IP™ fieldbus system. Thanks to a powerful web interface and integrated IODD interpreter it is possible to configure and diagnose the IO-Link master even from a tablet or smartphone and easily read, parameterize or configure the IO-Link devices connected. Thanks to IO-Link V 1.1 it is possible to replace a connected device by downloading all parameters into a replacement device automatically from the Master. With Y series IO-Link masters it is possible to simultaneously provide data access via different communication protocols like EtherNet/IP™, Modbus/TCP and OPC UA to multiple controllers.

Main features

- Embedded web server and IODD interpreter to configure and access diagnostic information of the attached IO-Link devices and of the fieldbus module itself (e.g. setting the IP address and subnet mask) without the need of a specific software
- Possibility to store the configuration of all devices connected in the IO-Link master memory to allow the system to work even without a higher-level PLC and to enable error-proof sensor replacement with automatic parameterization
- IIoT ready, thanks to the integrated OPC UA interface that allows reliable, continuous and transparent data transfer between the field level (sensor/actuator) and higher-level cloud systems in full compliance with the Industry 4.0 requirements
- Quick and easy installation on a standard DIN rail
- Pluggable/removable connectors, supplied together with the IO-Link Master, allow high flexibility and time saving in any installation
- Industrial grade components and redundant power inputs make Y series IO-Link masters exceptionally reliable for critical applications
- Multi-colour LEDs with status and diagnostics information for each channel

Main functions

IO-Link masters allow to connect all sections of a plant in a single industrial network, from the management level (ERP) right down to the field level (sensors and actuators) to increase the availability and efficiency of machines and plants. In addition to this, Y series IO-Link masters are specifically designed to enable the complete integration into the industrial communication system.
