

METAL OXIDE VARISTOR

# ZENAMIC

ZENAMIC is the product name of a metal oxide varistor. ZENAMIC Transient/Surge Absorber, Series D is newly released through our continued research in ceramic material composition of ZnO varistor and manufacturing process, featuring large surge current handling capability and energy handling capability for absorbing transient overvoltage in compact size.

## Features

- Improved in "Surge Current Handling Capability (at 8/20 $\mu$ s, 2 times)" by about 2 times over the current.
- Very large "Energy Handling Capability" absorbing transient overvoltages in compact sizes.
- Lower Clamping Voltage for better surge protection.
- Fast response to high speed transient/surge voltage.
- Wide products range for transient/surge protection on AC 100V to AC 480V nominal system with the maximum peak current ratings of 600A to 7000A (at 8/20  $\mu$ s, 2 times).

### V-I characteristics

ZENAMIC has the forward-reverse symmetrical electrical characteristics as shown in the figure 1. The voltage-current curves show the varistor characteristics in the range 1 μA to 10<sup>4</sup>A, and show the resistance characteristics for the range under 1 μA and over 10<sup>4</sup>A in the figure 2. The voltage across terminals when test current(I<sub>t</sub>: 1 mA) is applied to ZENAMIC is the standard varistor voltage(V<sub>Z</sub>), and the voltage across terminals when a standard surge(I<sub>p</sub>) is applied represents the maximum suppression voltage(V<sub>C</sub>).

### Temperature characteristics

In the small current range, ZENAMIC features outstanding temperature characteristics. A shunt resistance R<sub>p</sub> of metal oxide varistor has the temperature characteristics which is determined by the following equation.

$$R_p = A e^{E_g / 2kT} \quad (2)$$

T: Absolute temperature  
k: Boltzmann constant  
A, E<sub>g</sub>: constants

As shown in the figure 3, the temperature dependence characteristics are shown clearly in the low current area.

### Surge waveform

A surge waveform varies according to the sources. An EXP waveform is used for surge testing of ZENAMIC, while a AC half-wave is used for the energy absorption test. The EXP waveform reaches its peak voltage (current) at [t<sub>a</sub>] as shown in the figure 5, and then decreases as time passes and reaches half of the peak voltage (current) at [t<sub>b</sub>]. This type of the EXP waveform is shown as a [t<sub>a</sub>/t<sub>b</sub>] voltage (current) waveform. For surge testing of ZENAMIC, the 8/20 μsec current waveform is used.

### Part Number.

### Application notes (General)

1. A surge excess of the specified Maximum Peak Current may cause short circuit or mechanical damage. The following measures are recommended.
  - In case that ZENAMIC is used in line to ground, the ground fault circuit interrupter shall be applied in location A or thermally coupled fuse shall be applied in location C.
  - ZENAMIC shall not be used near heat generating device and free from direct sunlight.
  - ZENAMIC shall not be used near the flammable materials.

- 1) Location of the over current protector (circuit breaker or current fuse) shall be in the power line to the circuit (Location A) or in series with ZENAMIC (Location B).
- 2) It is recommended that a fuse listed in the table be put in location A or B.

- 3) In case that ZENAMIC is used in line to ground, the ground fault circuit interrupter should be applied in location A or thermally coupled fuse should be applied in location C.

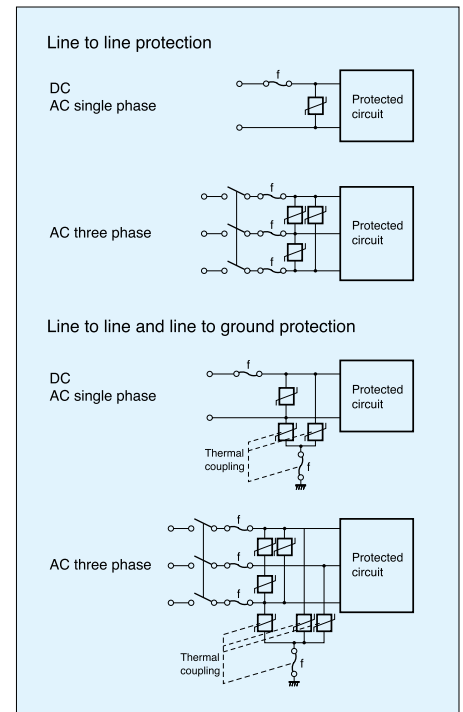

Part Number	Z7D□□□	Z10D□□□
Rating of fuse	5A max.	7A max.

Part Number	Z15D□□□	Z21D□□□
Rating of fuse	10A max.	15A max.

Refer to the related Safety Standards.

### Applications

Power lines and surge absorption units with error display (SA series).
