

Wideband Amplifier ZVA-24443G1+

Mini-Circuits

50 Ω 24 to 43.5 GHz¹

THE BIG DEAL

APPLICATIONS
5G (24-39 GHz)

Q-Band SATCOM

Test and Instrumentation

- Extremely Low Noise Figure of 1.7 dB typ. through Q-Band
- High Gain of 45 dB typ., over 5G bands 24 to 39 GHz
- Available with and without heatsink
- Operates with a single DC supply of +9 to +15 V
- Over-Voltage and Reverse Voltage protected

Model No.	ZVA-24443G1+ ZVA-24443G1X+			
Case Style	T2704			
Connectors	2.92mm Female			

+RoHS Compliant The +Suffix identifies RoHS Compliance. See our web site for RoHS Compliance methodologies and qualifications

PRODUCT OVERVIEW

Mini-Circuits' ZVA-24443G1+ is a co-axial, low noise, wideband and high gain amplifier operating from 24 GHz to 43.5 GHz1. The model operates over a single positive supply range of +9 to +15 V, allowing users to choose their desired operating voltage. Internal DC-DC conversion circuitry maintains constant efficiency over the full input voltage range. The amplifier incorporates several DC-protection features such as over-voltage, reverse voltage and In-rush current that protects the amplifier from damage if mishandled during operation. The Amplifier is capable of delivering about 100mW (+20 dBm) of RF power over the entire band and has an excellent Noise figure performance of 1.7 dB, typ over the entire band, hence making it an ideal choice for applications with extremely demanding dynamic range requirements.

KEY FEATURES

Feature	Advantages		
Wide-band amplifier, 24 to 43.5 $\mathrm{GHz^1}$	A single amplifier serves the need for applications including 5G bands (24 to 39 GHz), Q-Band SATCOM, Test instrumentation etc.		
• High Gain • Low Noise • Medium RF power	The amplifier is capable of providing high gain of over 45 dB typ. in the entire operating band with extremely L noise of 1.7 dB typ. and good RF power of about +20 dBm.		
Adjustable DC Supply voltage	The device is capable of operating from +9 to +15 V with constant DC power consumption.		
DC Protection – • Over-voltage • Reverse voltage • In-rush current	The internal DC circuitry allows the amplifier to be protected from any external mishandling that could lead to catastrophic failures in the field.		

1. Amplifier is usable down to 22 GHz

Amplifier is usable down to 22 GHz
 DC Supply must be able to source at least 400mA DC at startup.

▲ For units without heat-sink, limit the maximum base-plate temperature to 50°C to ensure proper performance. Alternative heat sinking and heat removal can be provided by the user with max. thermal resistance of 1.8°C/W. This allows the max. base plate temperature to be +85°C.

3. Open and short-circuit loads and not recommended at the amplifier output. Ensure proper 50 Ohm load before turning the amplifier "ON".
