

# Wide band Digital Step Attenuator

## ZX76-31A+ Series

50Ω 0 to 31 dB, 1 dB Step DC to 4.0 GHz

### The Big Deal

- Wideband, operates up to 4 GHz
- Immune to latchup
- High IP3, 52 dBm
- Control inputs buffered by Schmitt Triggers

### Product Overview

The ZX76-31A+ series of 50Ω digital step attenuators adjustable attenuation from 0 to 31 dB in 1 dB steps. The control is a 5-bit serial/parallel interface, and the attenuators operate with either single positive or dual (positive and negative) supply voltage. Control lines are buffered by Schmitt Triggers to allow a wide range of control voltage levels. The ZX76-31A+ series is produced using a unique unibody case package for ruggedness and operation in tough environments.

### Key Features

Feature	Advantages
Wideband operation, specified from DC to 4.0 GHz	Can be used in multiple applications such as communications, satellite and defense, reducing part count.
Serial interface (Model suffixes: -SN+ and -SP+) or parallel interface (Model suffixes: -PN+ and -PP+)	Models available with serial or parallel interface mode to suit customer demand.
Good VSWR, 1.3:1 typ.	Eases interfacing with adjacent components and results in low amplitude ripple.
Single positive supply models: (Model suffixes: -SPS+ and -PPS+) +2.3 to +3.6 V	Use of single positive supply simplifies power supply design. An internal negative voltage generator supplies the desired negative voltage. Single positive supply results in excellent spurious performance, -140 dBm typical.
Dual supply models: (Model suffixes: -SNS+ and -PNS+) +2.7 to +3.6 V (Positive) and -3.6 to -3.2 V (Negative)	Dual supply provides spurious-free operation. It also allows fast switching up to 1 MHz (vs. 25 kHz for single supply).
Replaces ZX76-31-XX-S+ series (XX=SN/SP/PN/PP)	Same case and pinout and provide wideband performance, to 4 GHz instead of 2.4 GHz.

# Digital Step Attenuator

50Ω DC-4000 MHz

31 dB, 1 dB Step

5 Bit, Parallel control interface, Single Supply Voltage

## Product Features

- Low Insertion Loss
- High IP3, +52 dBm Typ
- Excellent return loss, 20 dB Typ
- Excellent accuracy, 0.1 dB Typ
- Single Supply Voltage:  $V_{DD}=+3V$
- Control inputs buffered by Schmitt Triggers
- Rigid unibody case
- Protected by US patent 6,790,049

## General Description

The ZX76-31A-PPS+ is a 50Ω digital step attenuator provides adjustable attenuation of 0 to 31 dB in 1 dB steps. The control is a 5-bit parallel interface, and the attenuators operate on a single (positive) supply voltage. See application note AN-70-004 for 5V supply voltage. The ZX76-31A-PPS+ is produced using a unique case package for ruggedness and operation in tough environments.

J1-8	J4-5	C4	Control for attenuation bit, 4 dB	ORANGE
J1-9	J4-6	C8	Control for attenuation bit, 8 dB	BROWN
J1-10	J4-4	C2	Control for attenuation bit, 2 dB	RED

Note: Other pins not connected. Cable shield connected to case ground.

## Simplified Schematic

The ZX76-31A-PPS+ parallel interface consists of 5 control bits that select the desired attenuation state, as shown in Table 1: Truth Table

Table 1. Truth Table					
Attenuation State	C16	C8	C4	C2	C1
Reference	0	0	0	0	0
1 (dB)	0	0	0	0	1
2 (dB)	0	0	0	1	0
4 (dB)	0	0	1	0	0
8 (dB)	0	1	0	0	0
16 (dB)	1	0	0	0	0
31 (dB)	1	1	1	1	1

Note: Not all 32 possible combinations of C1 - C16 are shown in table

The parallel interface timing requirements are defined by Figure 1 (Parallel Interface Timing Diagram) and Table 2 (Parallel Interface AC Characteristics), and switching speed.

For latched parallel programming the Latch Enable (LE) should be held LOW while changing attenuation state control values, then pulse LE HIGH to LOW (per Figure 1) to latch new attenuation state into device.

For direct parallel programming, the Latch Enable (LE) line should be pulled HIGH. Changing attenuation state control values will change device state to new attenuation. Direct mode is ideal for manual control of the device (using hardware, switches, or jumpers).

Control cables for programming can be ordered separately. For details see page 7.

**Figure 1: Parallel Interface Timing Diagram**

Table 2. Parallel Interface AC Characteristics			
Symbol	Parameter	Min.	Units
$t_{LEPW}$	LE minimum pulse width	10	ns
$t_{PDSUP}$	Data set-up time before clock rising edge of LE	10	ns
$t_{PDHL}$	Data hold time after clock falling edge of LE	10	ns

## Power-up State

When the attenuator powers up and LE is logic low, the nominal attenuation is set on 0 dB. When LE is logic high, the nominal attenuation selected depends on the control logic state ( see Table 1 ).

## Recommended Accessories

Two optional cable accessories with and without interface connector are available with ZX76-31A-PPS+, the ZX76-CP+ and ZX76-WP+. Cable length is 4.9 feet / 1.5 meters.

ZX76-CP+ shielded cable with interface 25 pin D-type connector J4 and supplied software are used to control the ZX76-31A-PPS+ digital attenuator from a computer, using LPT port.

ZX76-WP+ shielded cable without interface 25 pin D-type connector enables customer to use the ZX76-31A-PPS+ digital attenuator in his own application.
