

## High-Precision and Bidirectional Current Monitor for Accurate High-/Low-Side Current Measurement

The DIODES™ ZXCT199 current monitor is a single-stage instrumentation amplifier designed to accurately measure very small sense voltages across a wide range of common-mode voltages. Its applications include current sensing of load currents in power supplies, motor controlling, and monitoring of charge and discharge currents in battery-powered equipment.

The ZXCT199's low offset voltage with zero-drift architecture enables it to achieve current sensing with maximum drops across the shunt resistor, to as low as 10mV full-scale, and thereby allowing the use of small-value sense resistors to monitor large currents.

The device is available in three fixed-voltage gain options: 50V/V, 100V/V, and 200V/V. Each option has a wide -0.1V to +26V common-mode sense input voltage range, independent of supply voltage.

All ZXCT199 variants operate from a 2.7V to 26V power supply, with a maximum of 100μA of supply current. The device operates across a -40°C to 125°C temperature range, and is packaged in the industry-standard SOT363 package.

### The DIODES™ Advantage

**High-precision current monitor supports large current measurement with small  $V_{SENSE}$  resistors and voltages.**

- **Offset Voltage as Low as 80μV**  
Minimizes errors when using low-value sense resistors
- **Gain Error as Low as 0.8%**  
Maintains accurate gain control across temperature and common-mode voltage
- **Common Mode Range: -0.1 to 26V**  
Accurately measures high-side and low-side currents, including short-circuited loads
- **Wide Operating Voltage Range: 2.7 to 26V**  
Provides options for powering separately or from a monitored supply
- **Robust ESD Capability (HBM: 5kV, CDM: 1.5kV)**  
Improves system reliability

### Applications

- High-/low-side current sensing, including short-circuits
- Laptop PCs
- Battery chargers
- Power-management devices
- Servers
- 12V motor controls
